

F01 · Phenotype atlas: matched work, divergent growth

Equal work and strength gains; groups split by muscle growth.

A

Training work performed

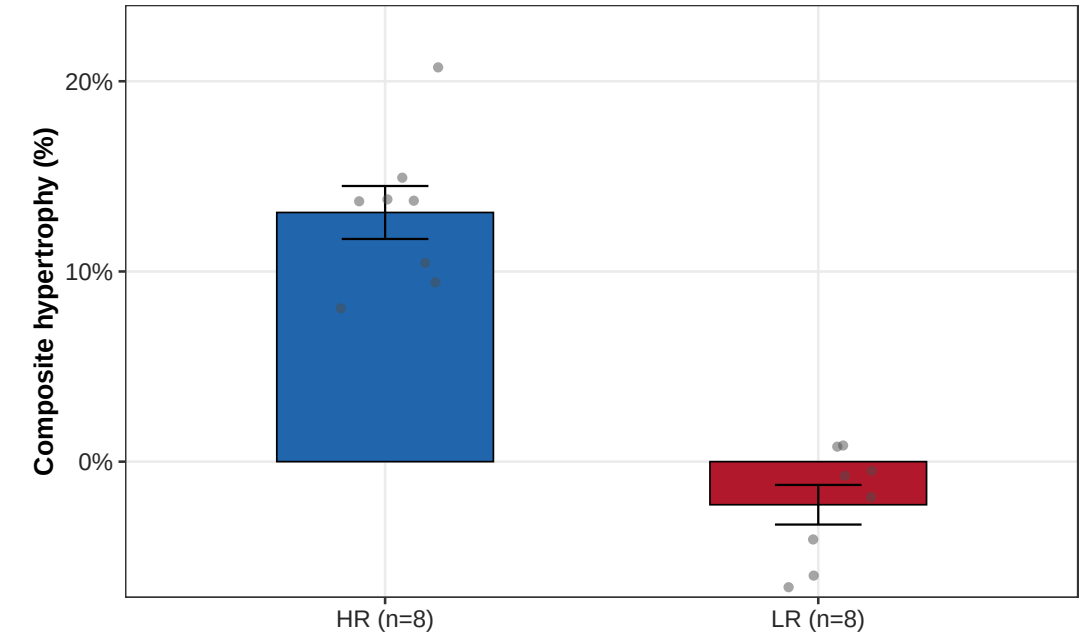

No group difference ($g = -0.22$, TOST $p = 0.30$)

B

The responder split

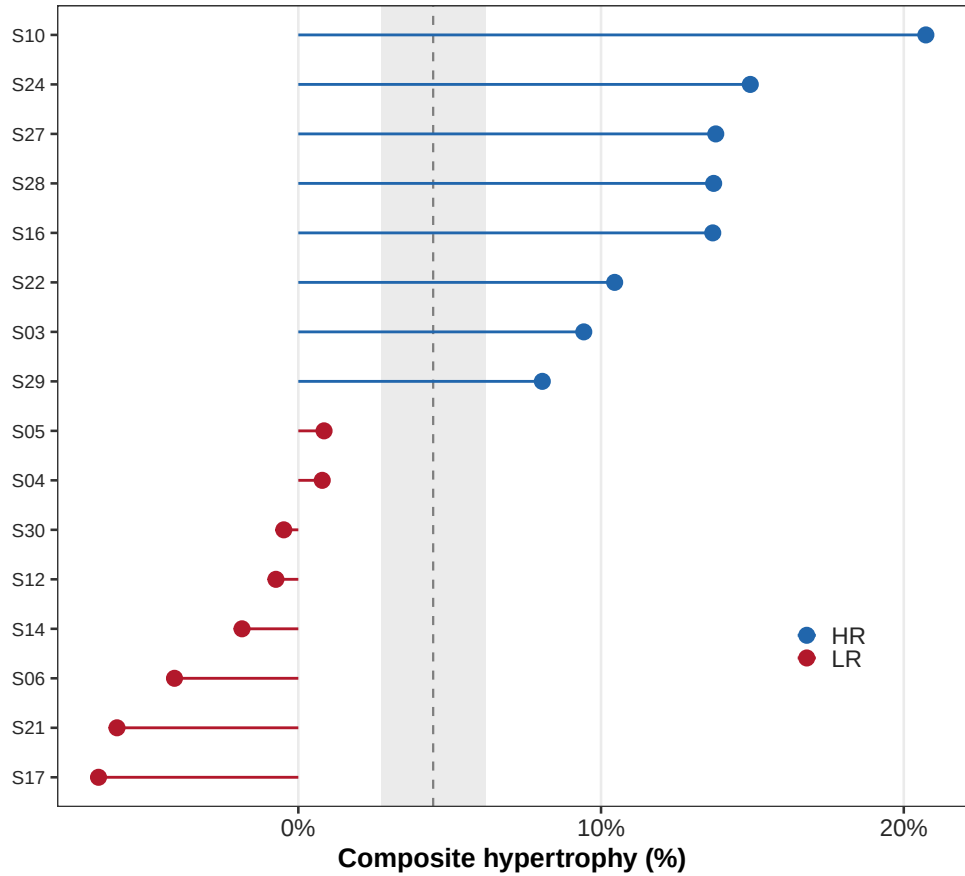

Mean z-scored %change, mCSA + fibre CSA; defines groups (circular)

C

Responders are a continuum

Subjects ranked; grey = small-difference zone, empty at the split

D

Phenotype change by domain (mixed model)

HR-LR change scaled to each measure's SD, so domains compare on one axis
