

Correlated proteins make set tests fire on any ranking, so the comparison is with the grey bar (shuffles' 95th percentile; tick, median), not with zero. Table: c_data/04_continuous.xlsx, pathway_chance.

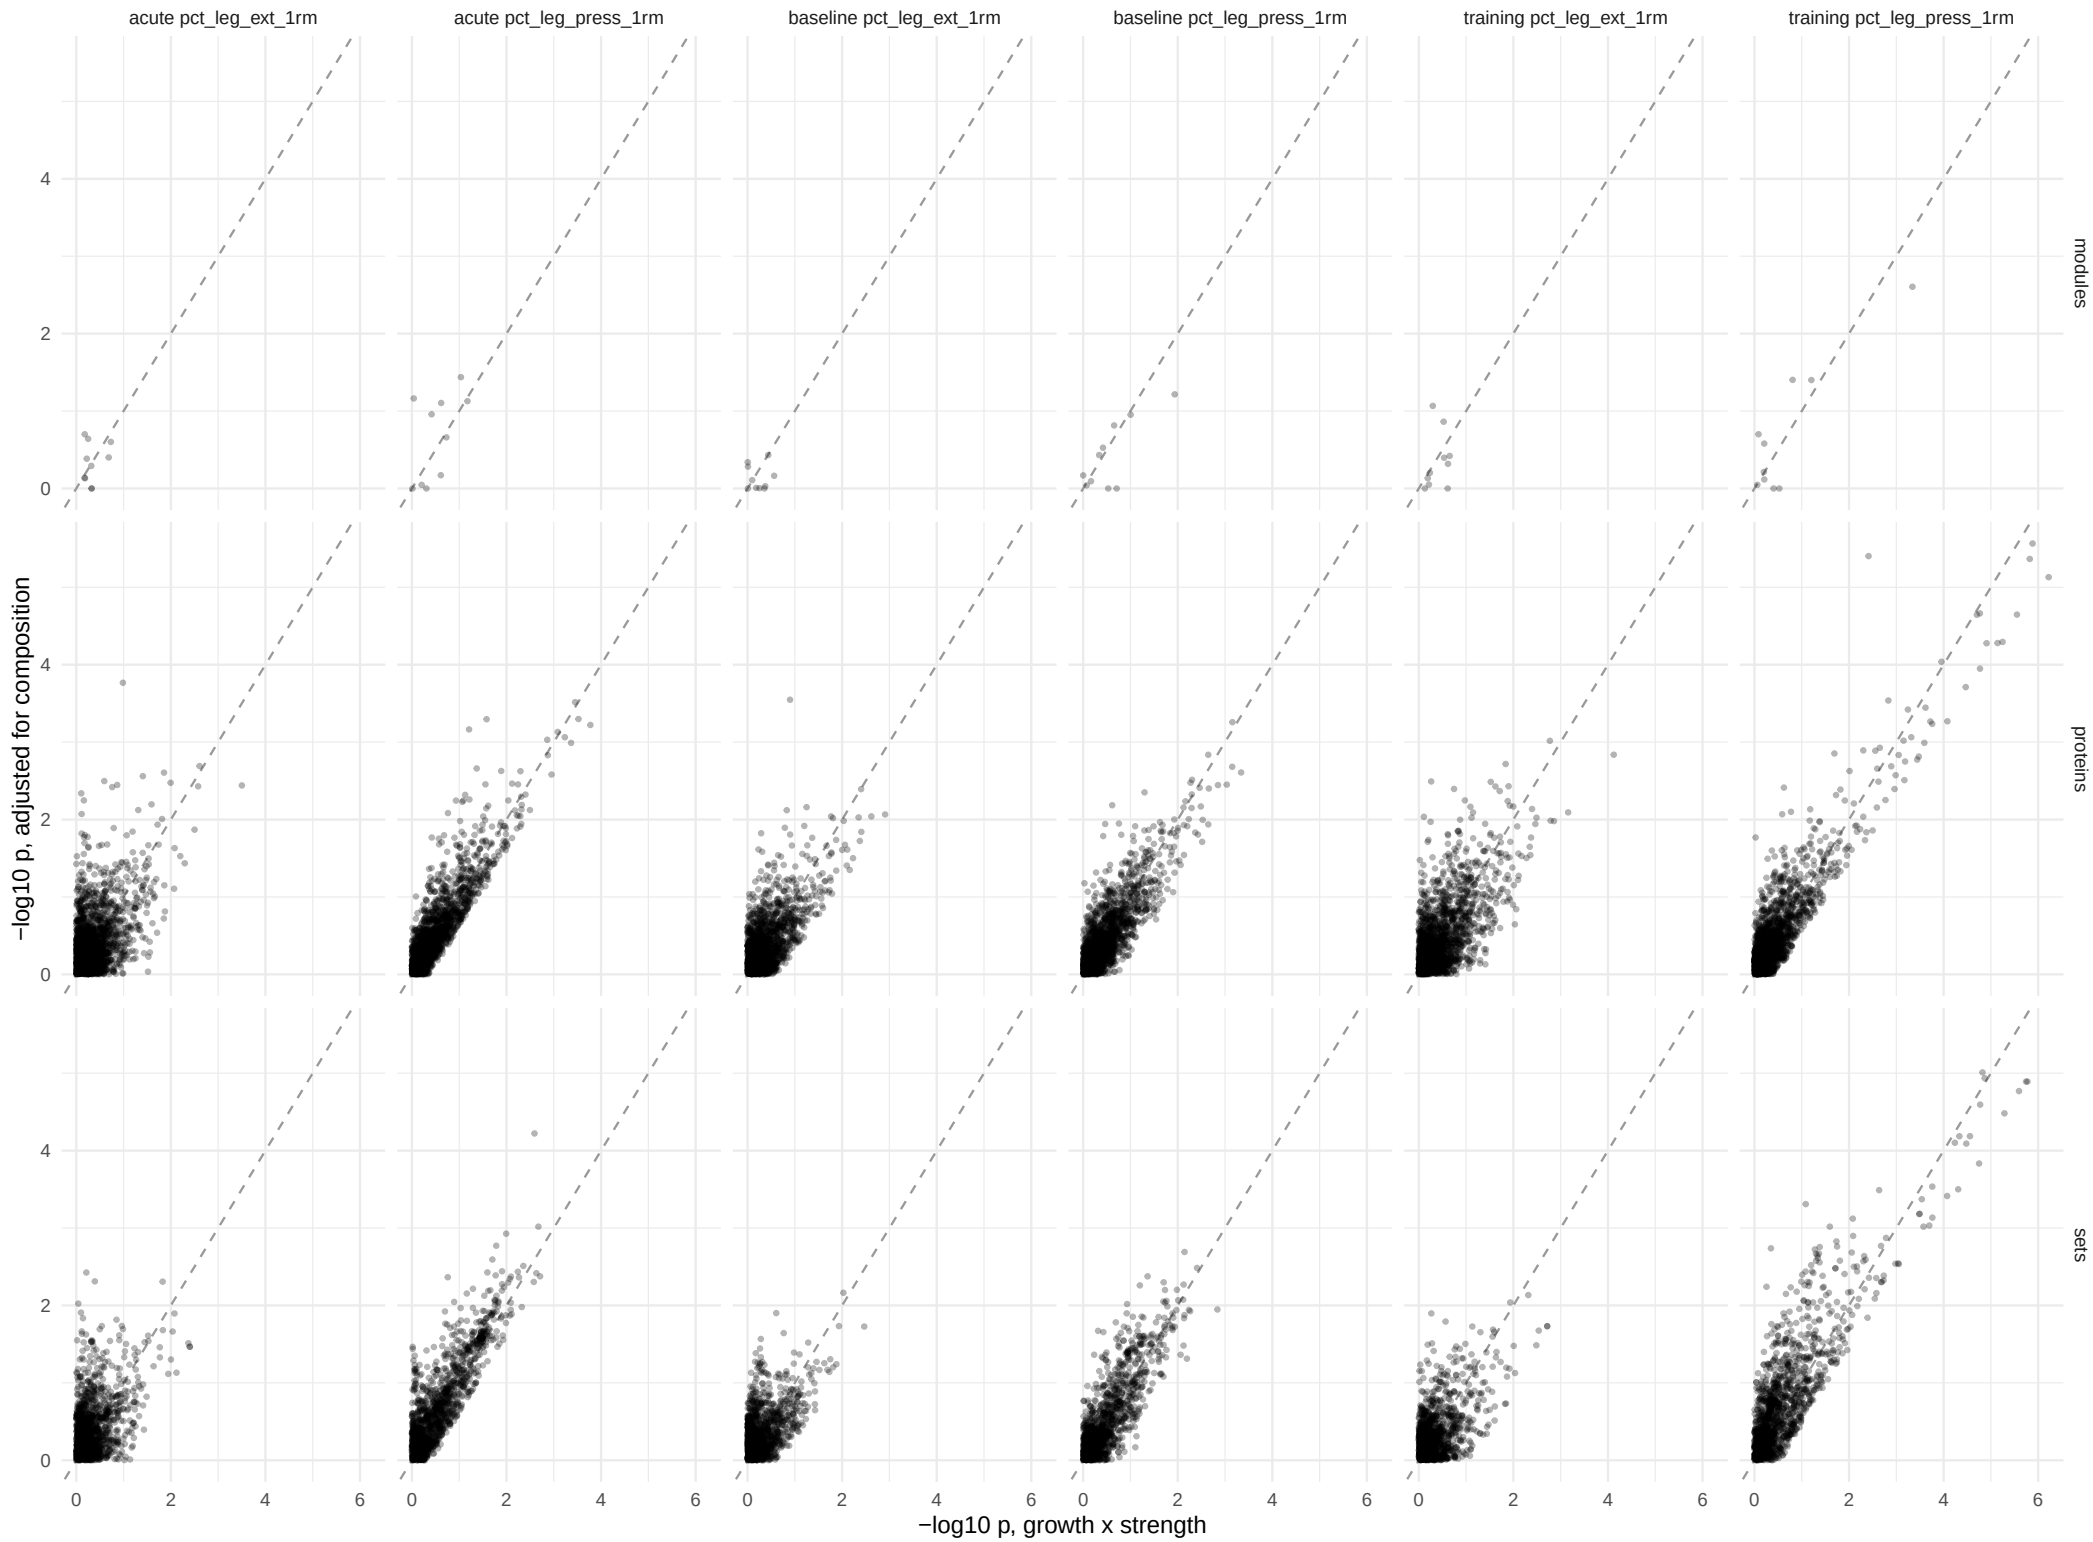

Each row a level and pairing; all traits of the pairing at once. Table: spls.

Background: the measured proteins. Table: string.

Composition check: the interaction with and without the magenta and yellow changes

Points on the diagonal do not depend on the composition covariates.
