

Protein association hits, training change (T2 – T1) (5/7)

Spearman against each phenotype; 453 proteins nominal in at least one column; rows 301–375

Rows: proteins at nominal $p < 0.05$ against at least one phenotype, most columns first, then by best p. Filled dot: nominal, fill = Spearman rho, size = $-\log_{10} p$. Black ring: BH < 0.05 . Grey speck: tested, not nominal. Table: c_data/03_phenotype.
