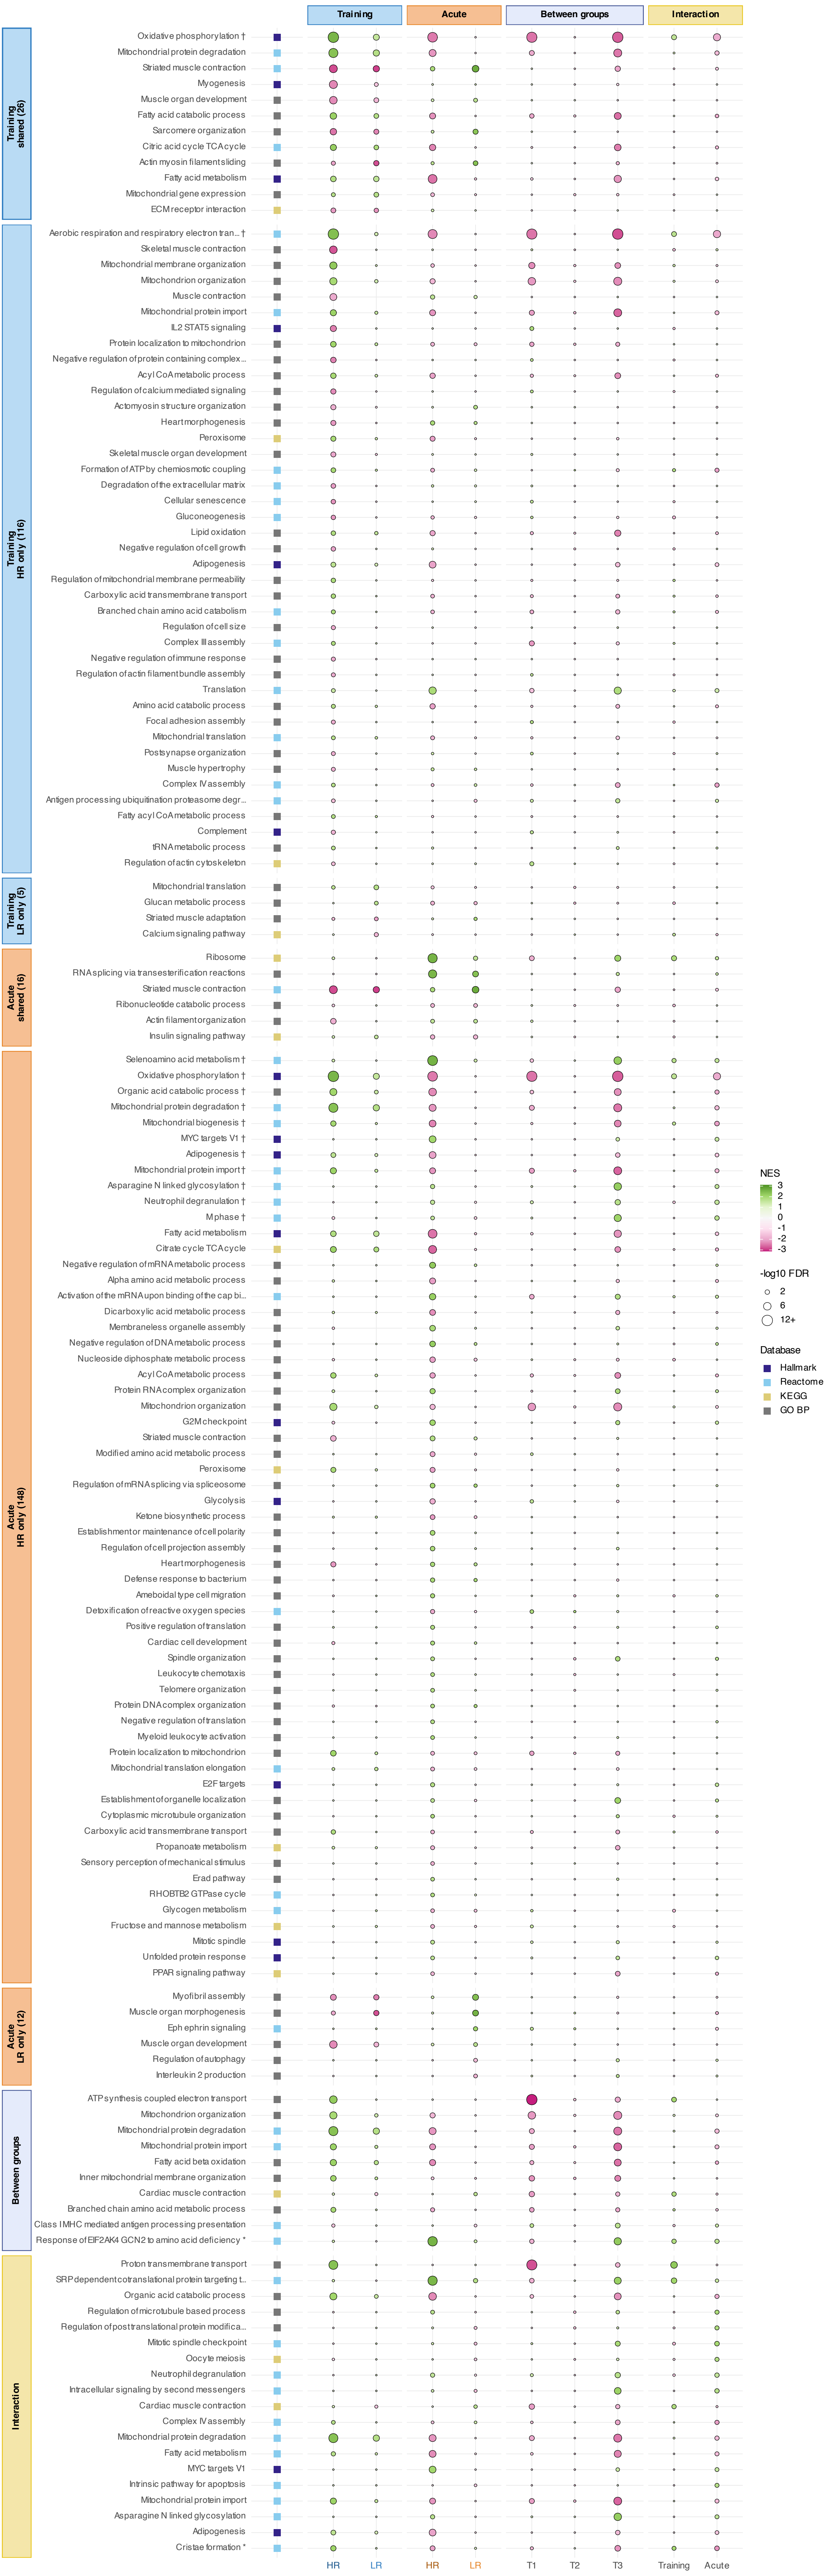
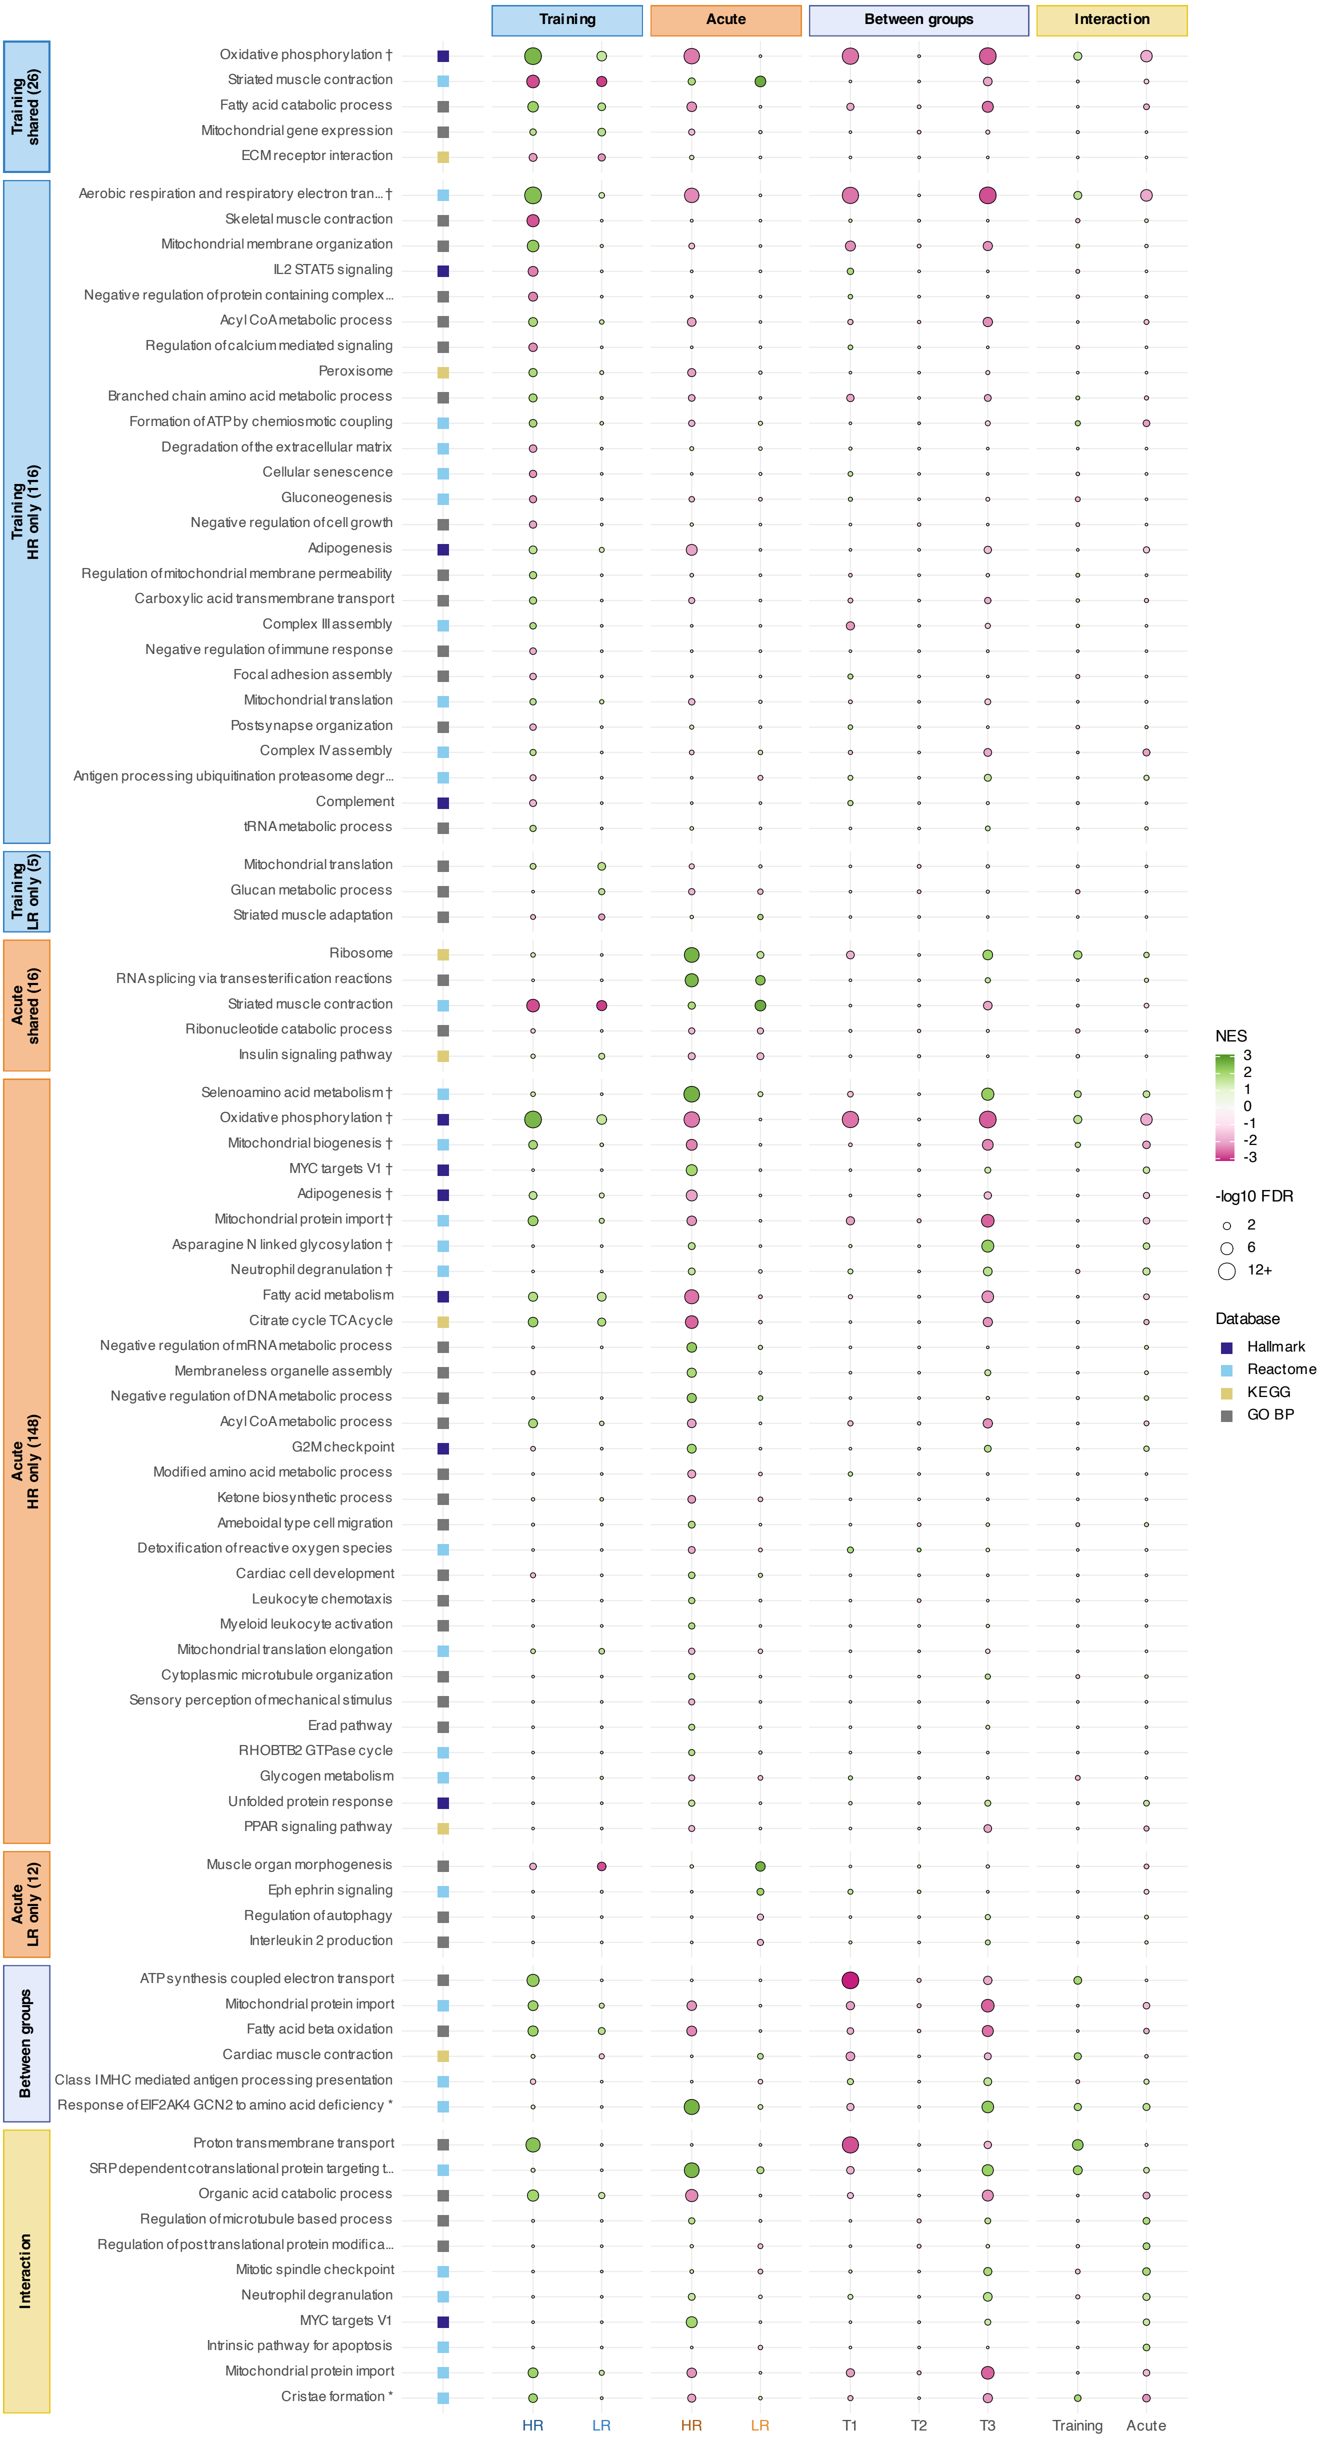
a Every candidate set, grouped by tree

Sets in leaf order of each block's tree (shared proteins, Jaccard, average linkage); bands alternate between clusters at height 0.85
bold: the cluster's most specific set; * calls of opposite sign; † interaction FDR < 0.05

b **One set per cluster at tree height 0.75**

As Figure 3 with the tree cut at 0.75 instead of 0.85, every cluster shown; * calls of opposite sign; † interaction FDR < 0.05





c **One set per cluster at tree height 0.9**

As Figure 3 with the tree cut at 0.9 instead of 0.85, every cluster shown; * calls of opposite sign; † interaction FDR < 0.05

d GO Slim themes in the nine contrasts

Every GO Slim theme; rows ordered by average-linkage clustering of their NES
