

Protein Filtering & Detection

2400 raw -> 1943 retained | 45 samples

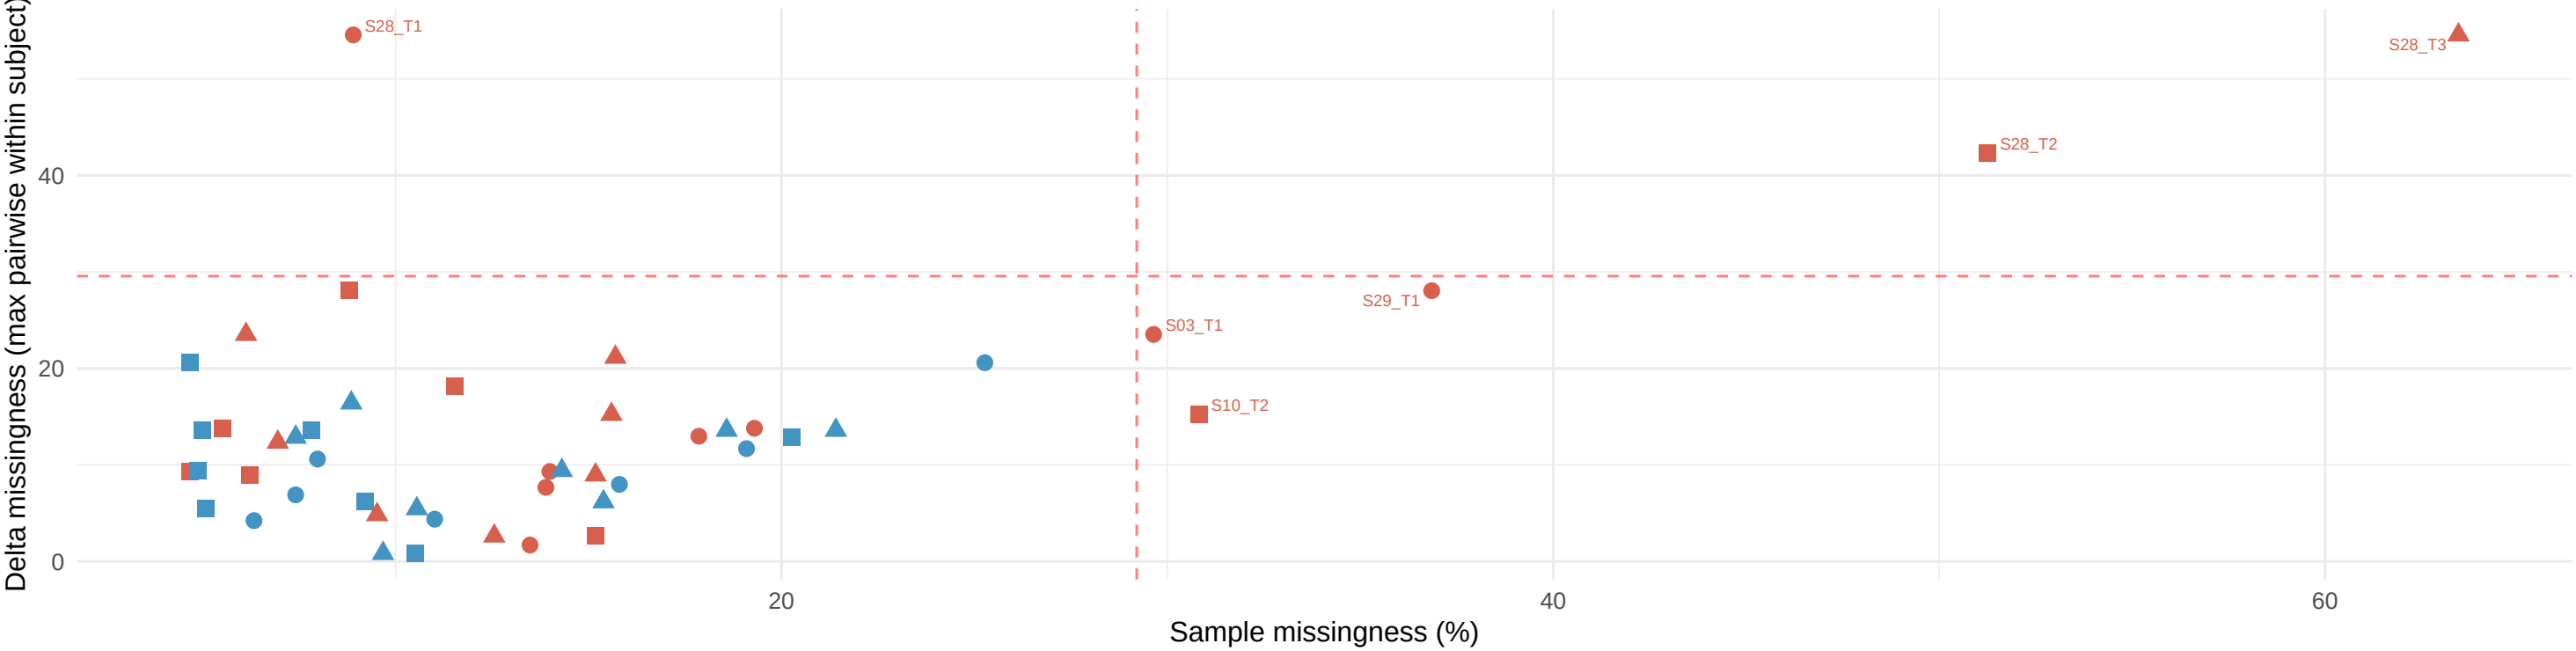

Outlier Diagnostics (4-method consensus)

Consensus rule: sample removed if ≥ 3 of 4 methods agree | 3 removed

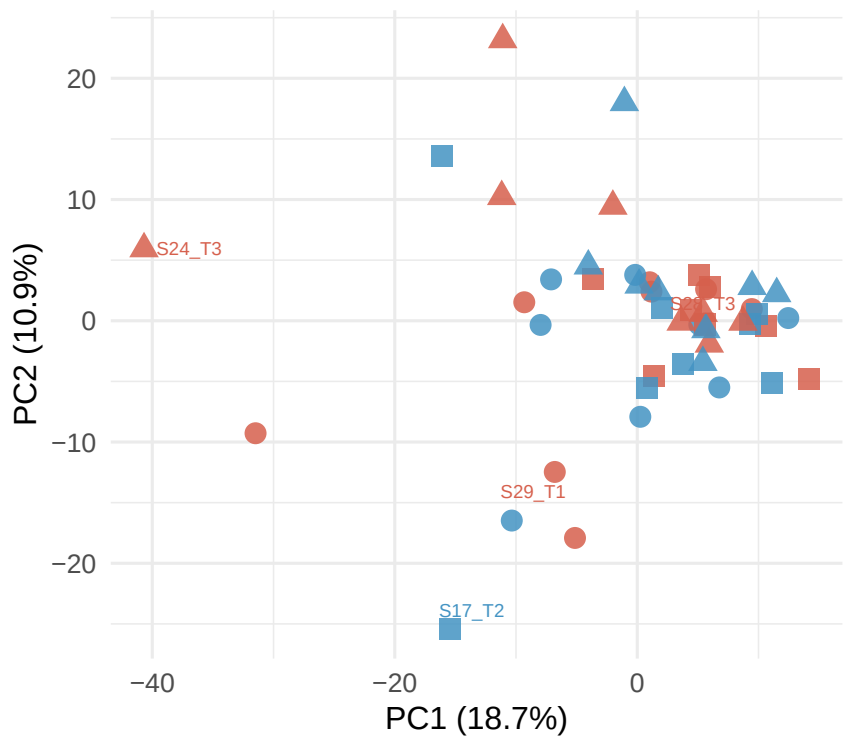

A: Missingness

IQR threshold: 29.2% miss, 29.6% delta | 6 flagged

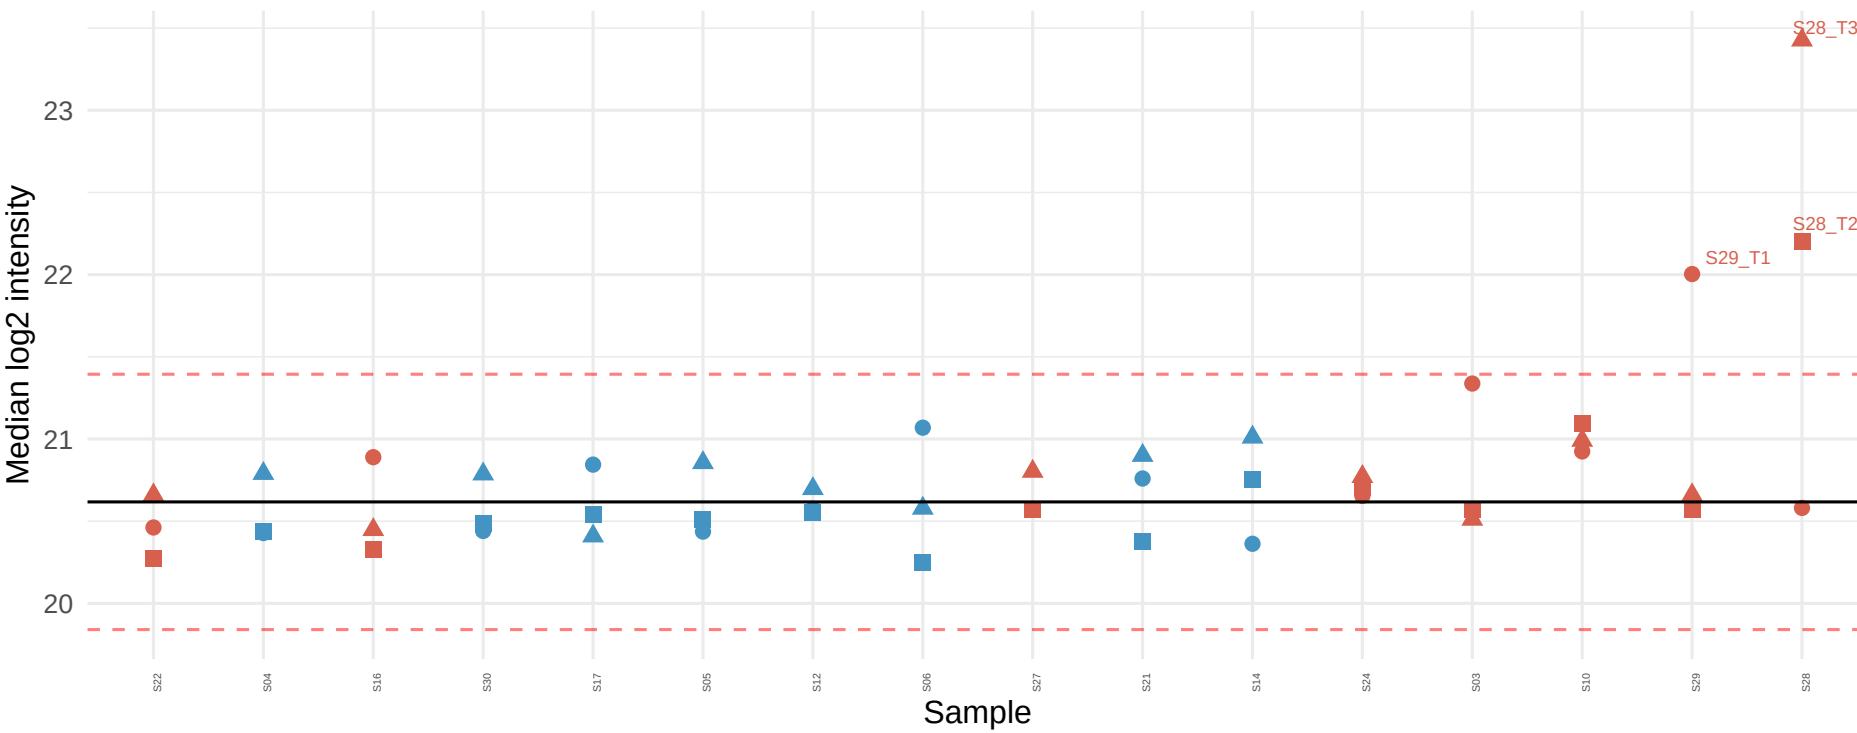

B: PCA Mahalanobis

chi-sq cutoff $p < 0.01$ | 4 flagged

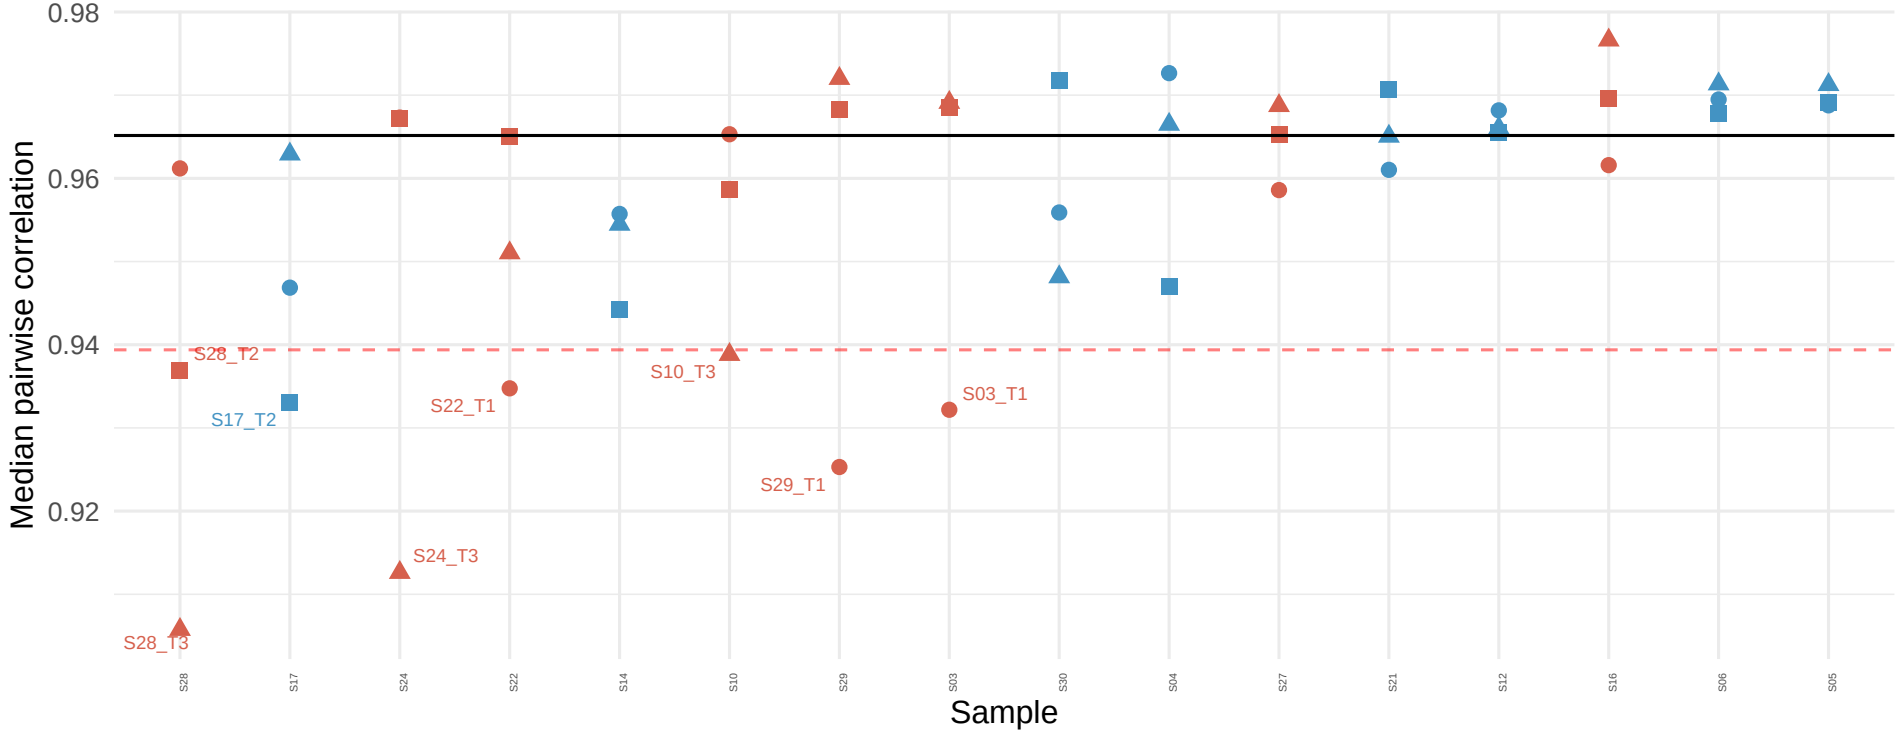

C: MAD median intensity

3x MAD band | 3 flagged

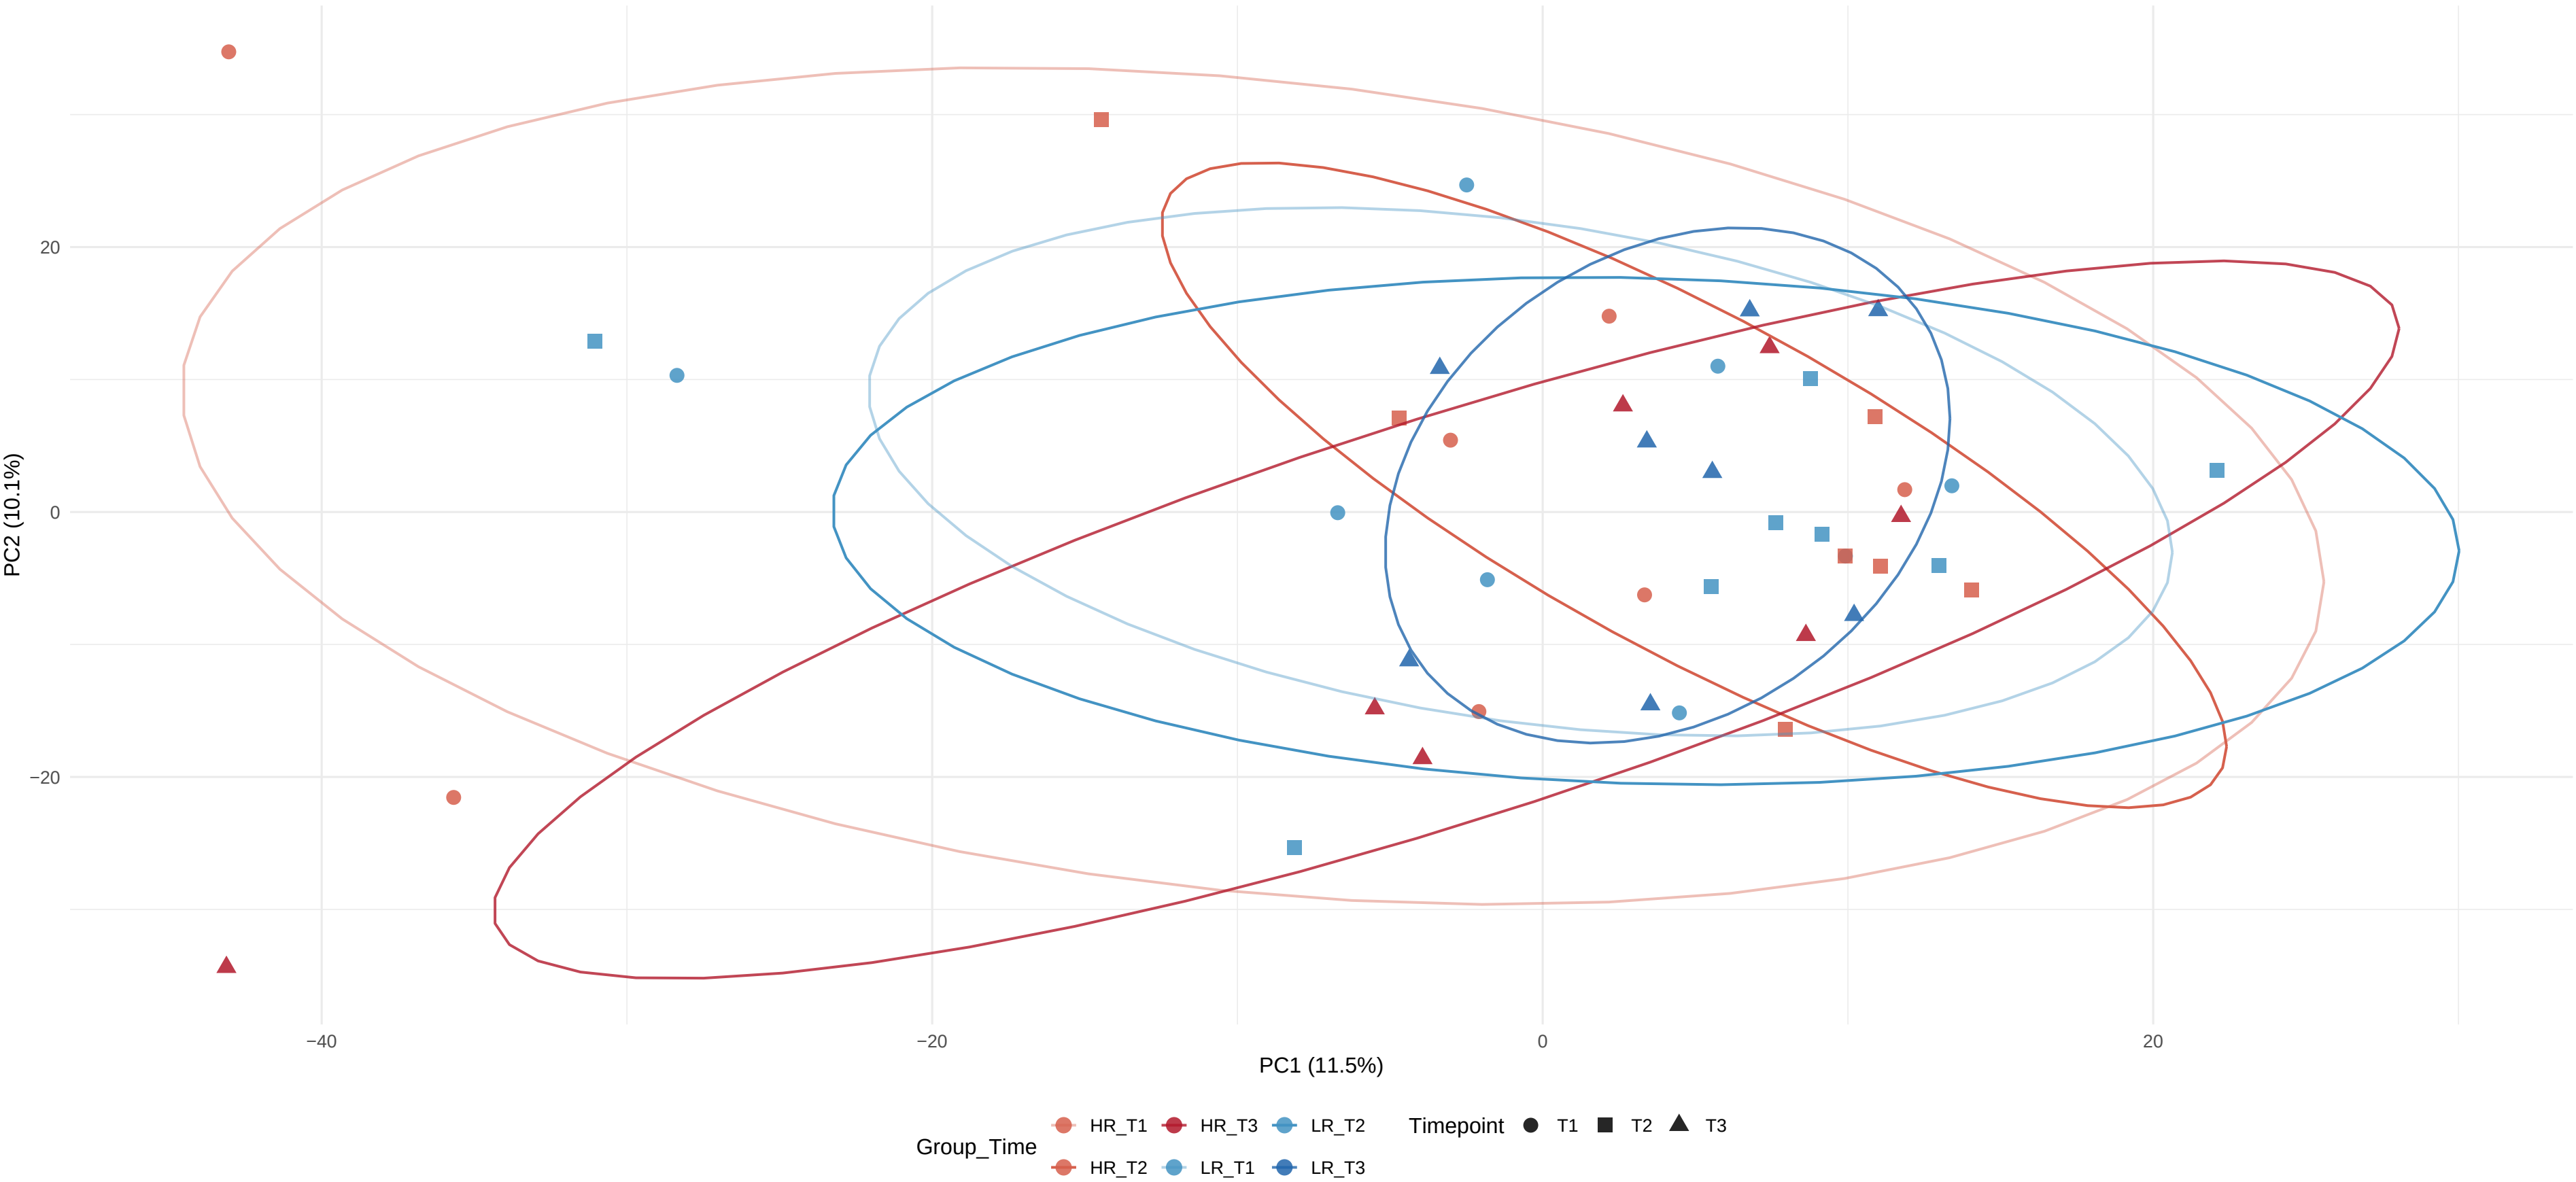

D: Inter-sample correlation

3x MAD band | 8 flagged

Post-Normalization QC

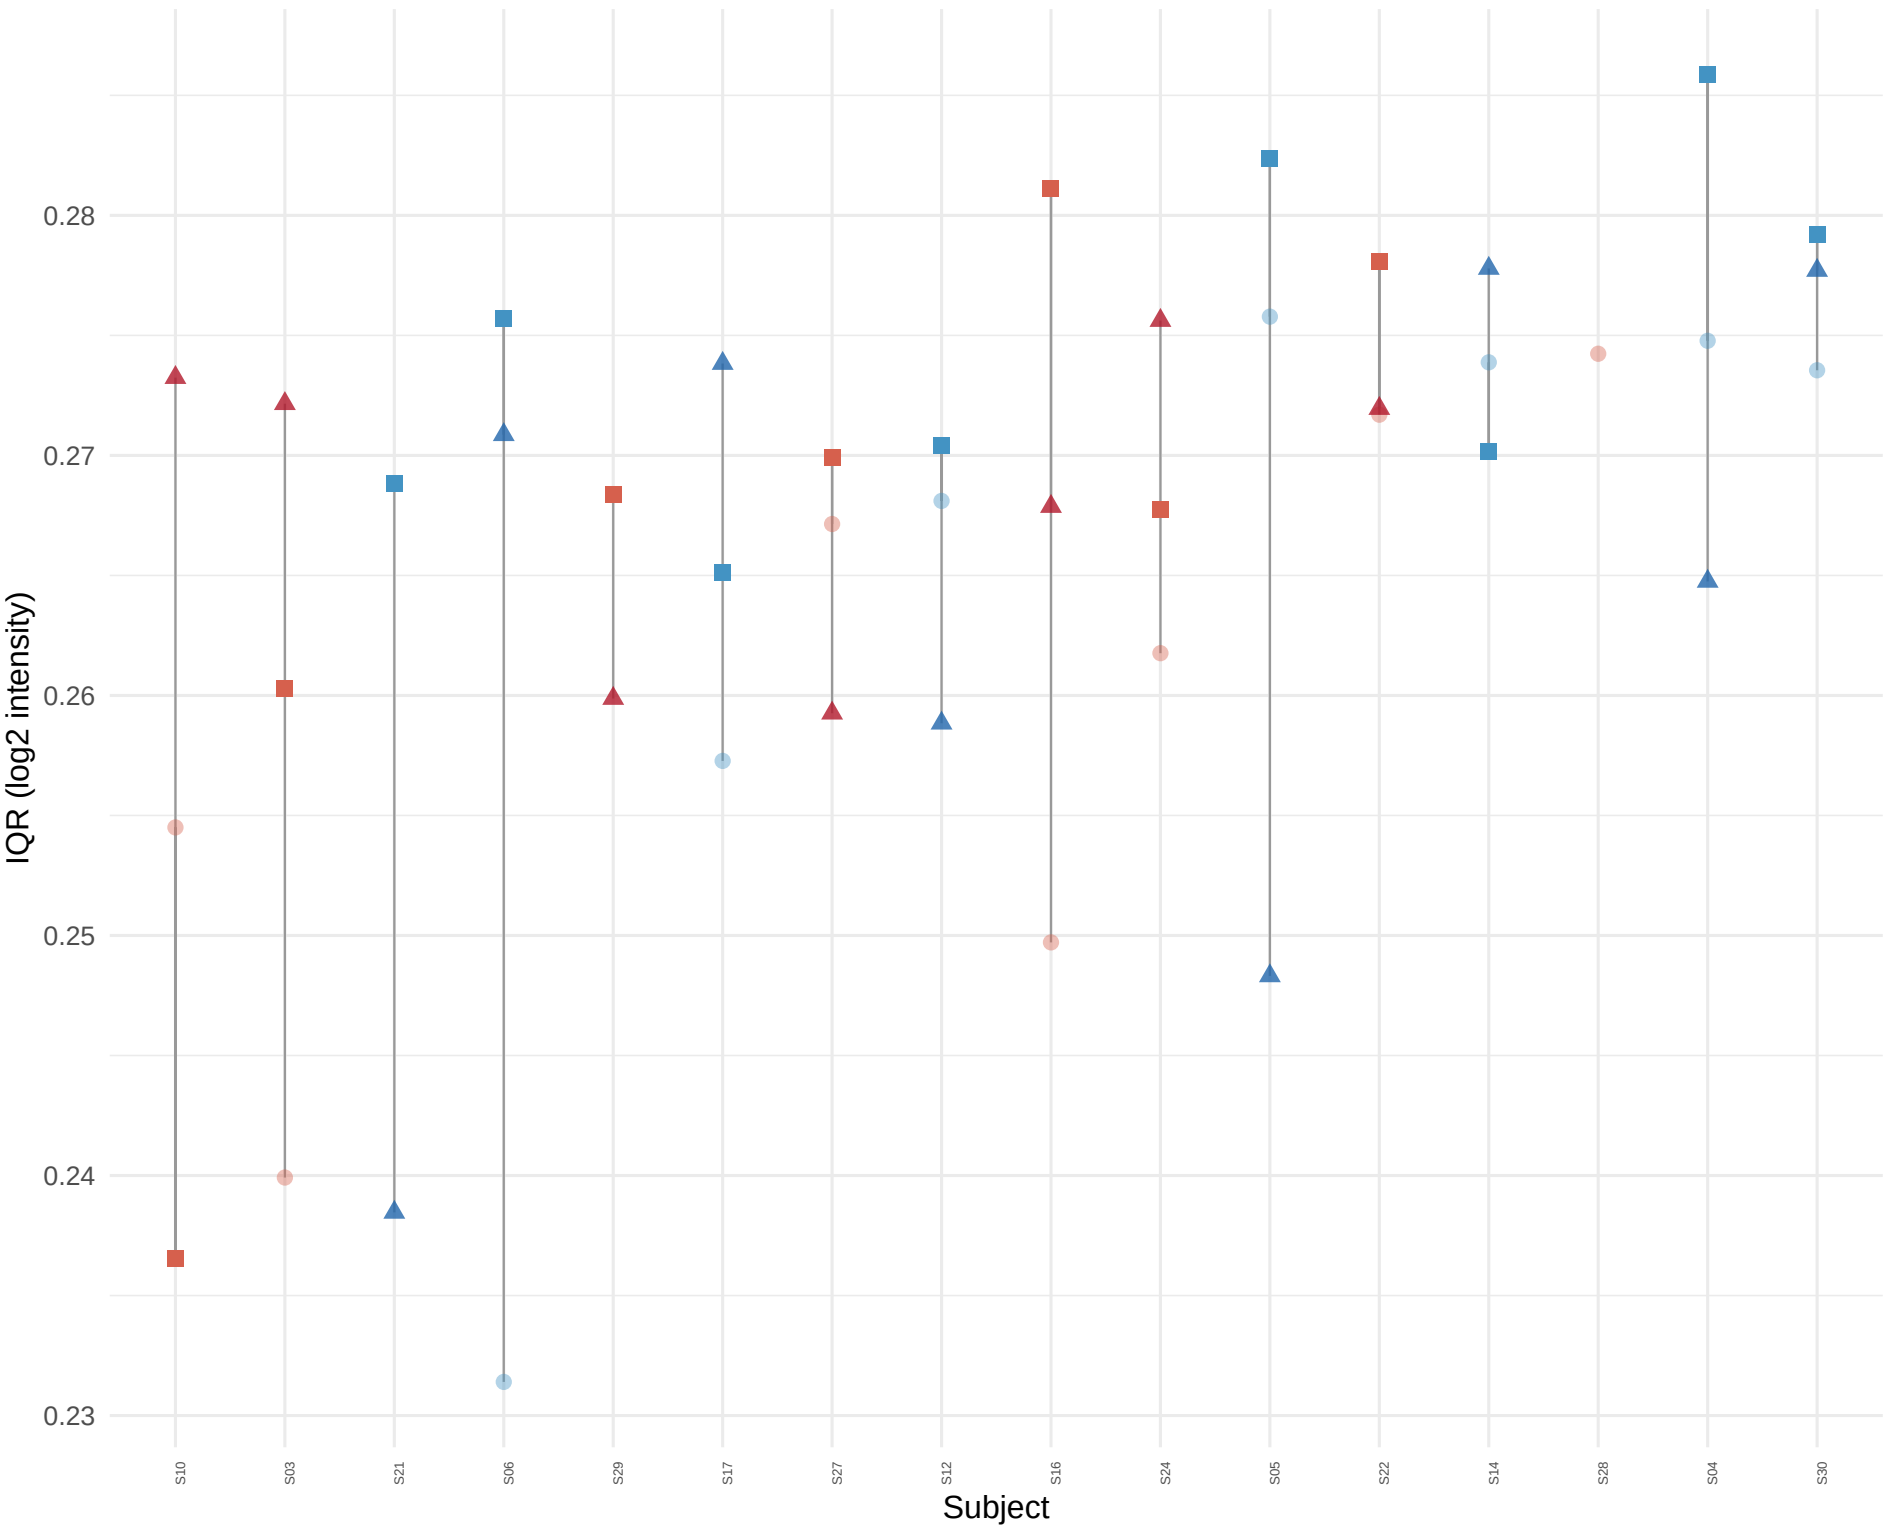

Post-normalization PCA

Variability Summary

Per-subject variability

IQR of log2 intensities per sample | 16 subjects | lines connect timepoints

Group_Time Timepoint

HR_T1	HR_T3	LR_T2	T1	T2	T3
HR_T2	LR_T1	LR_T3			

Variance partition by group

eta-sq = SS_between / SS_total | median = 0.13 | higher = more group-driven
