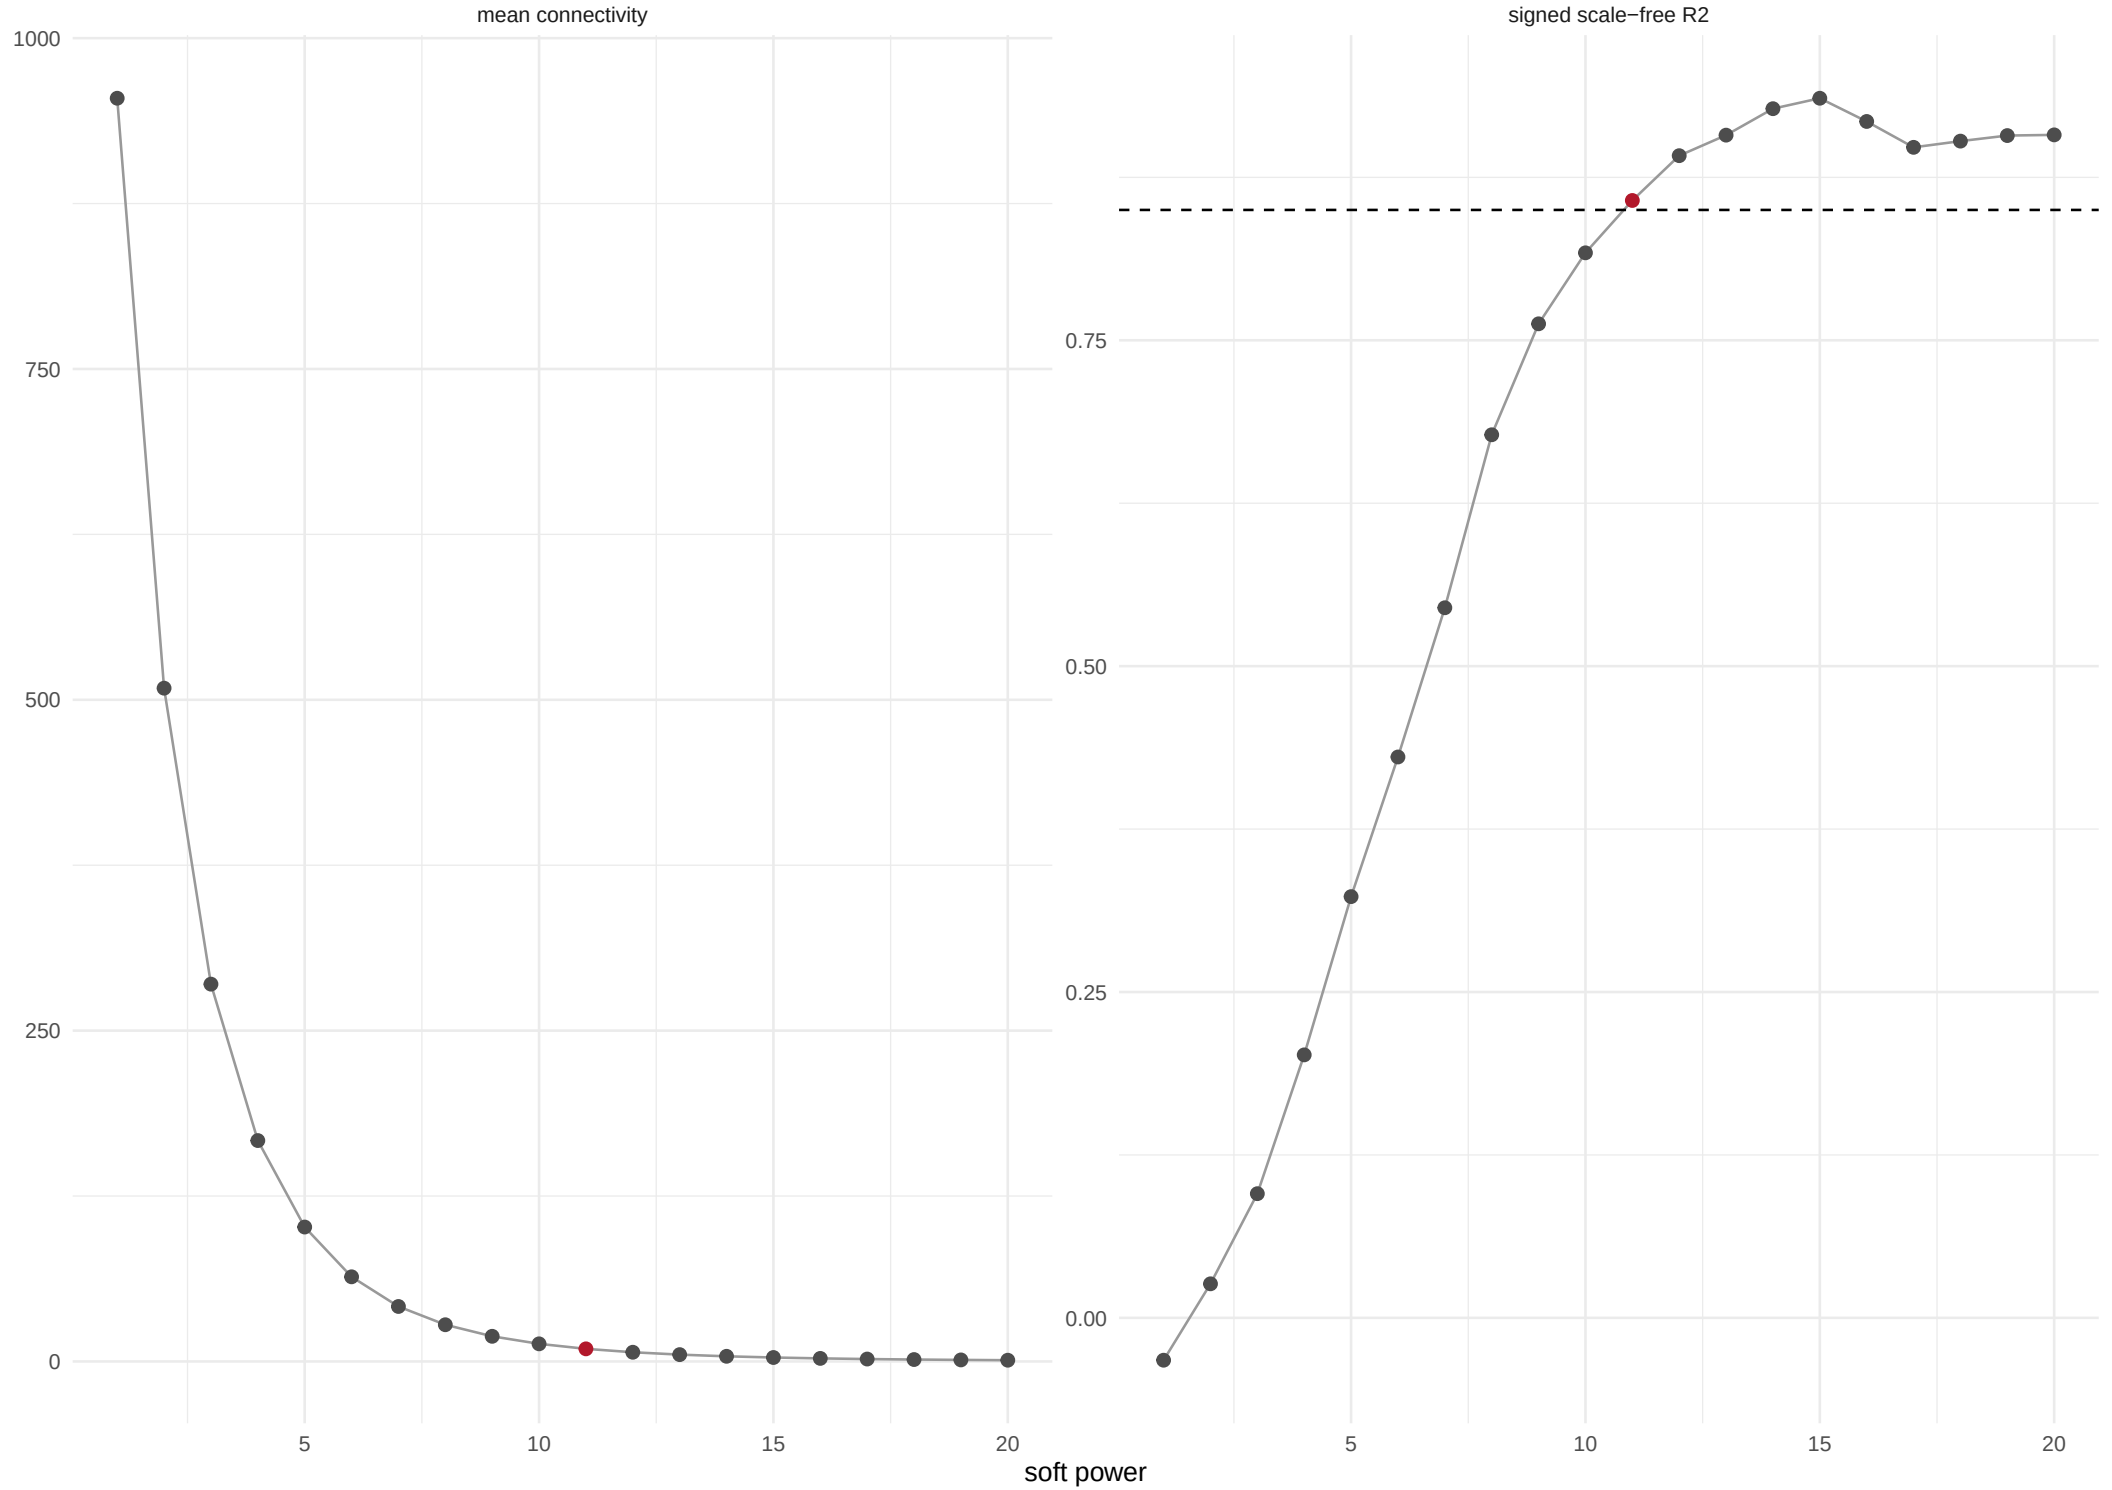
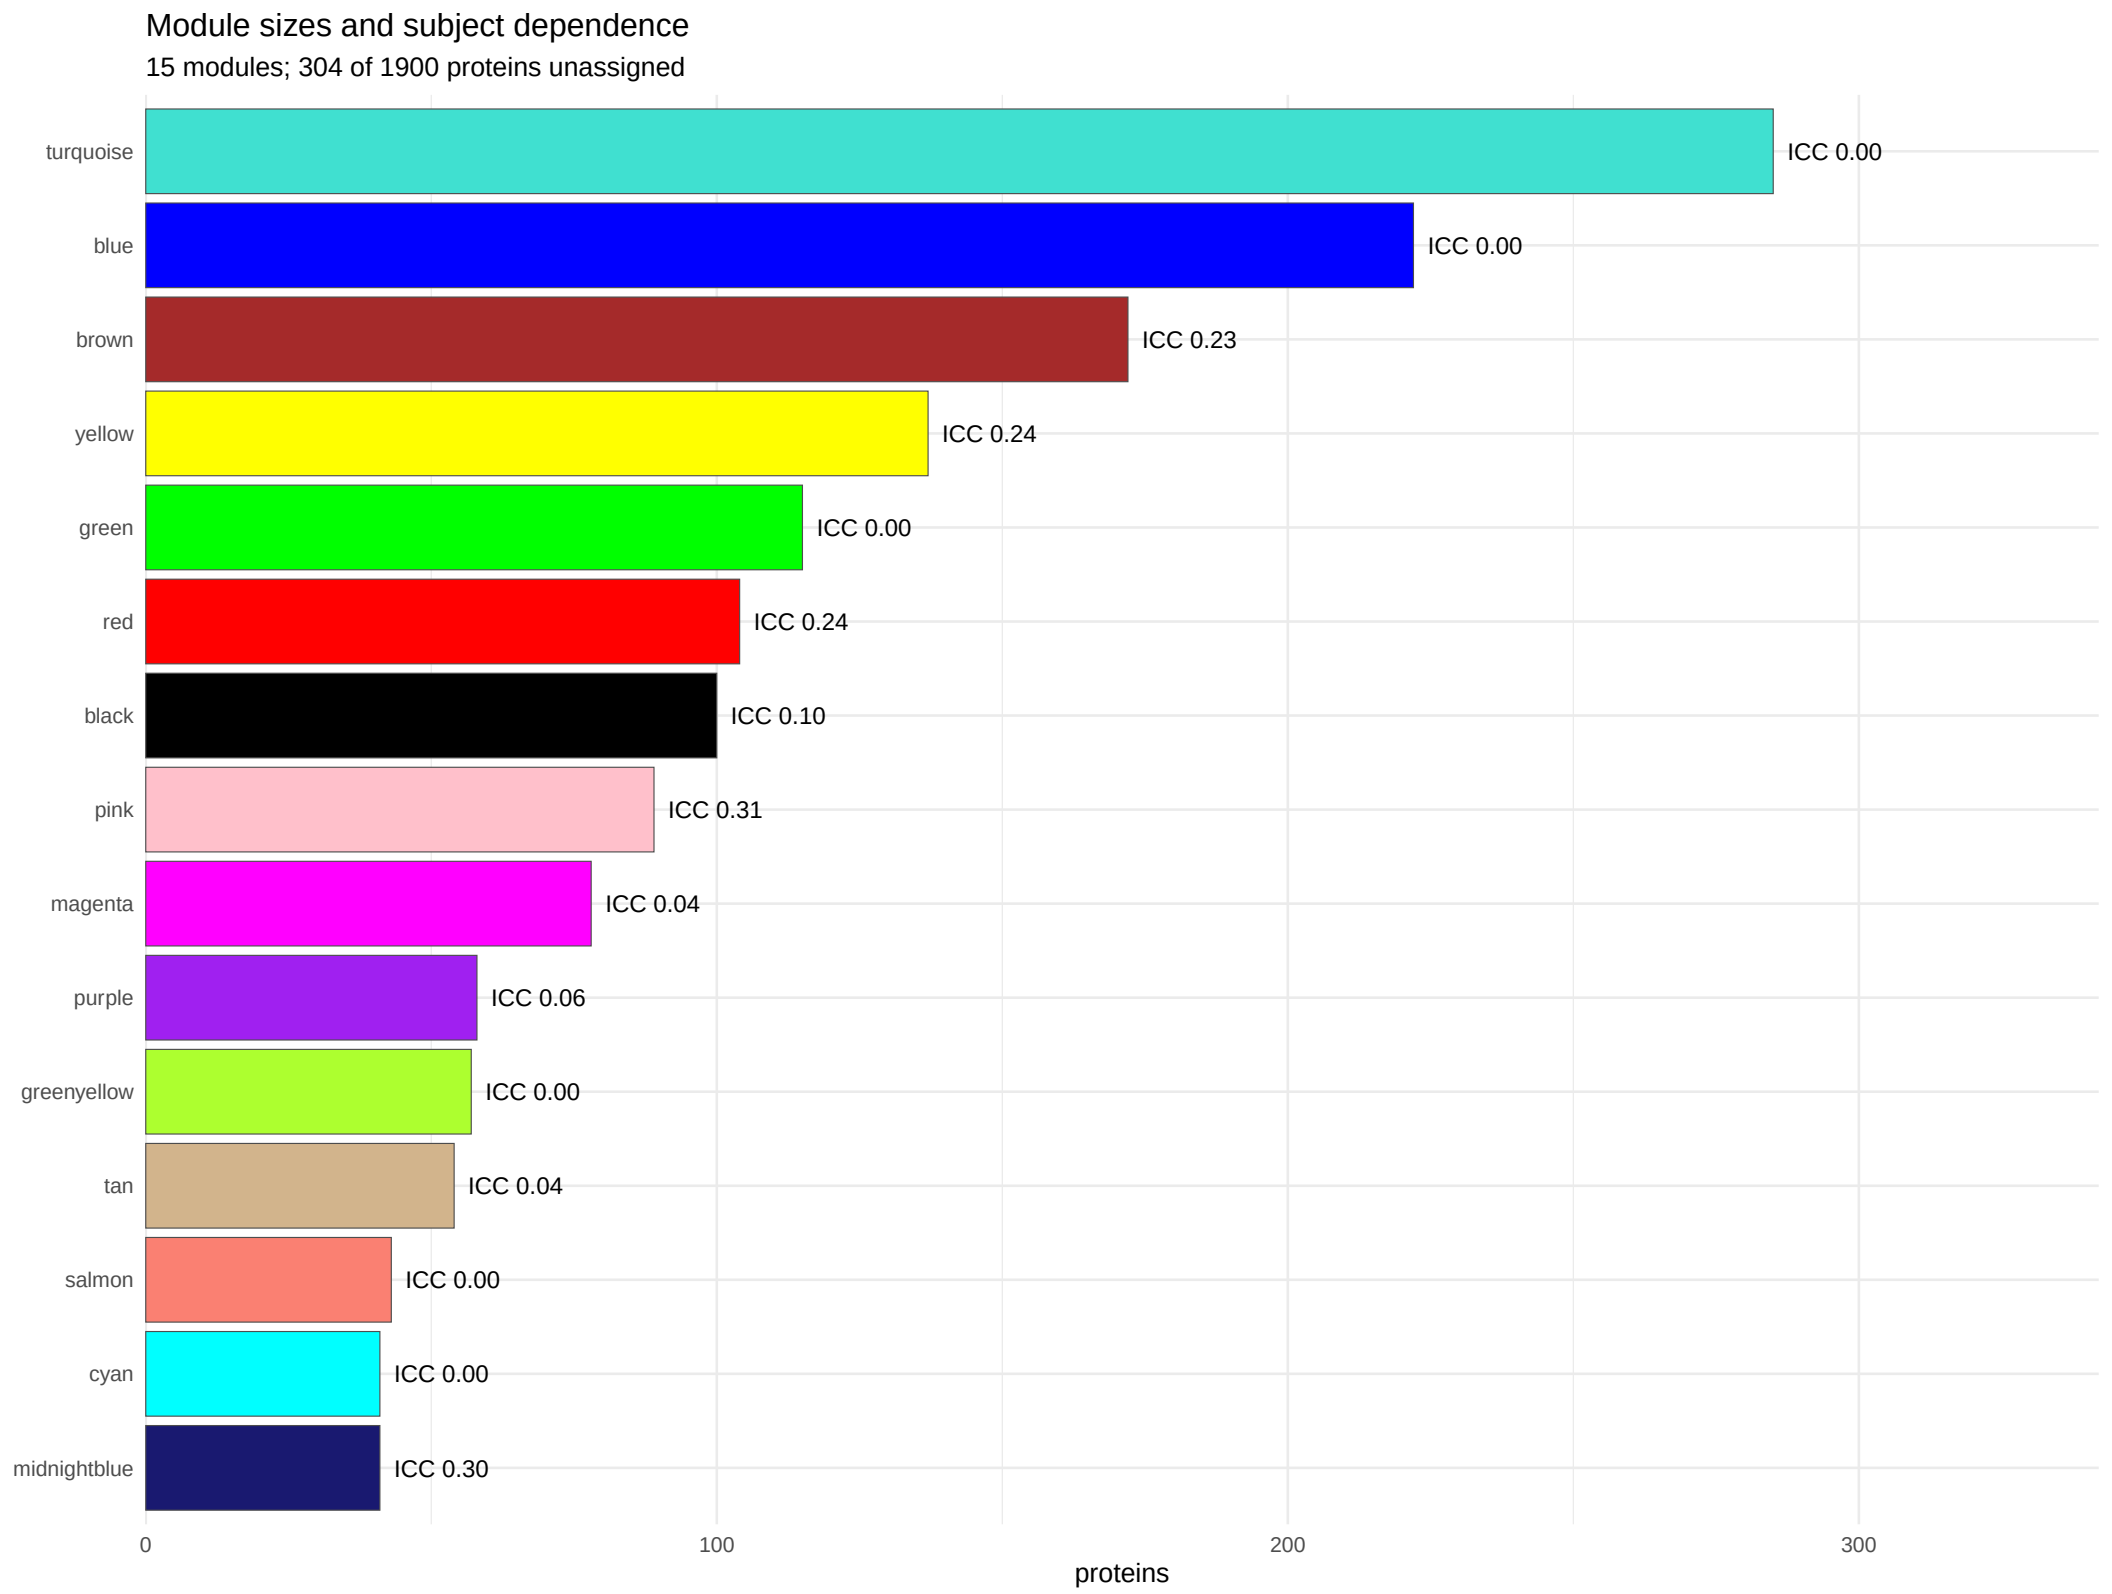
Soft−threshold choice

WGCNA signed network, bicor, subject−centred matrix; power 11



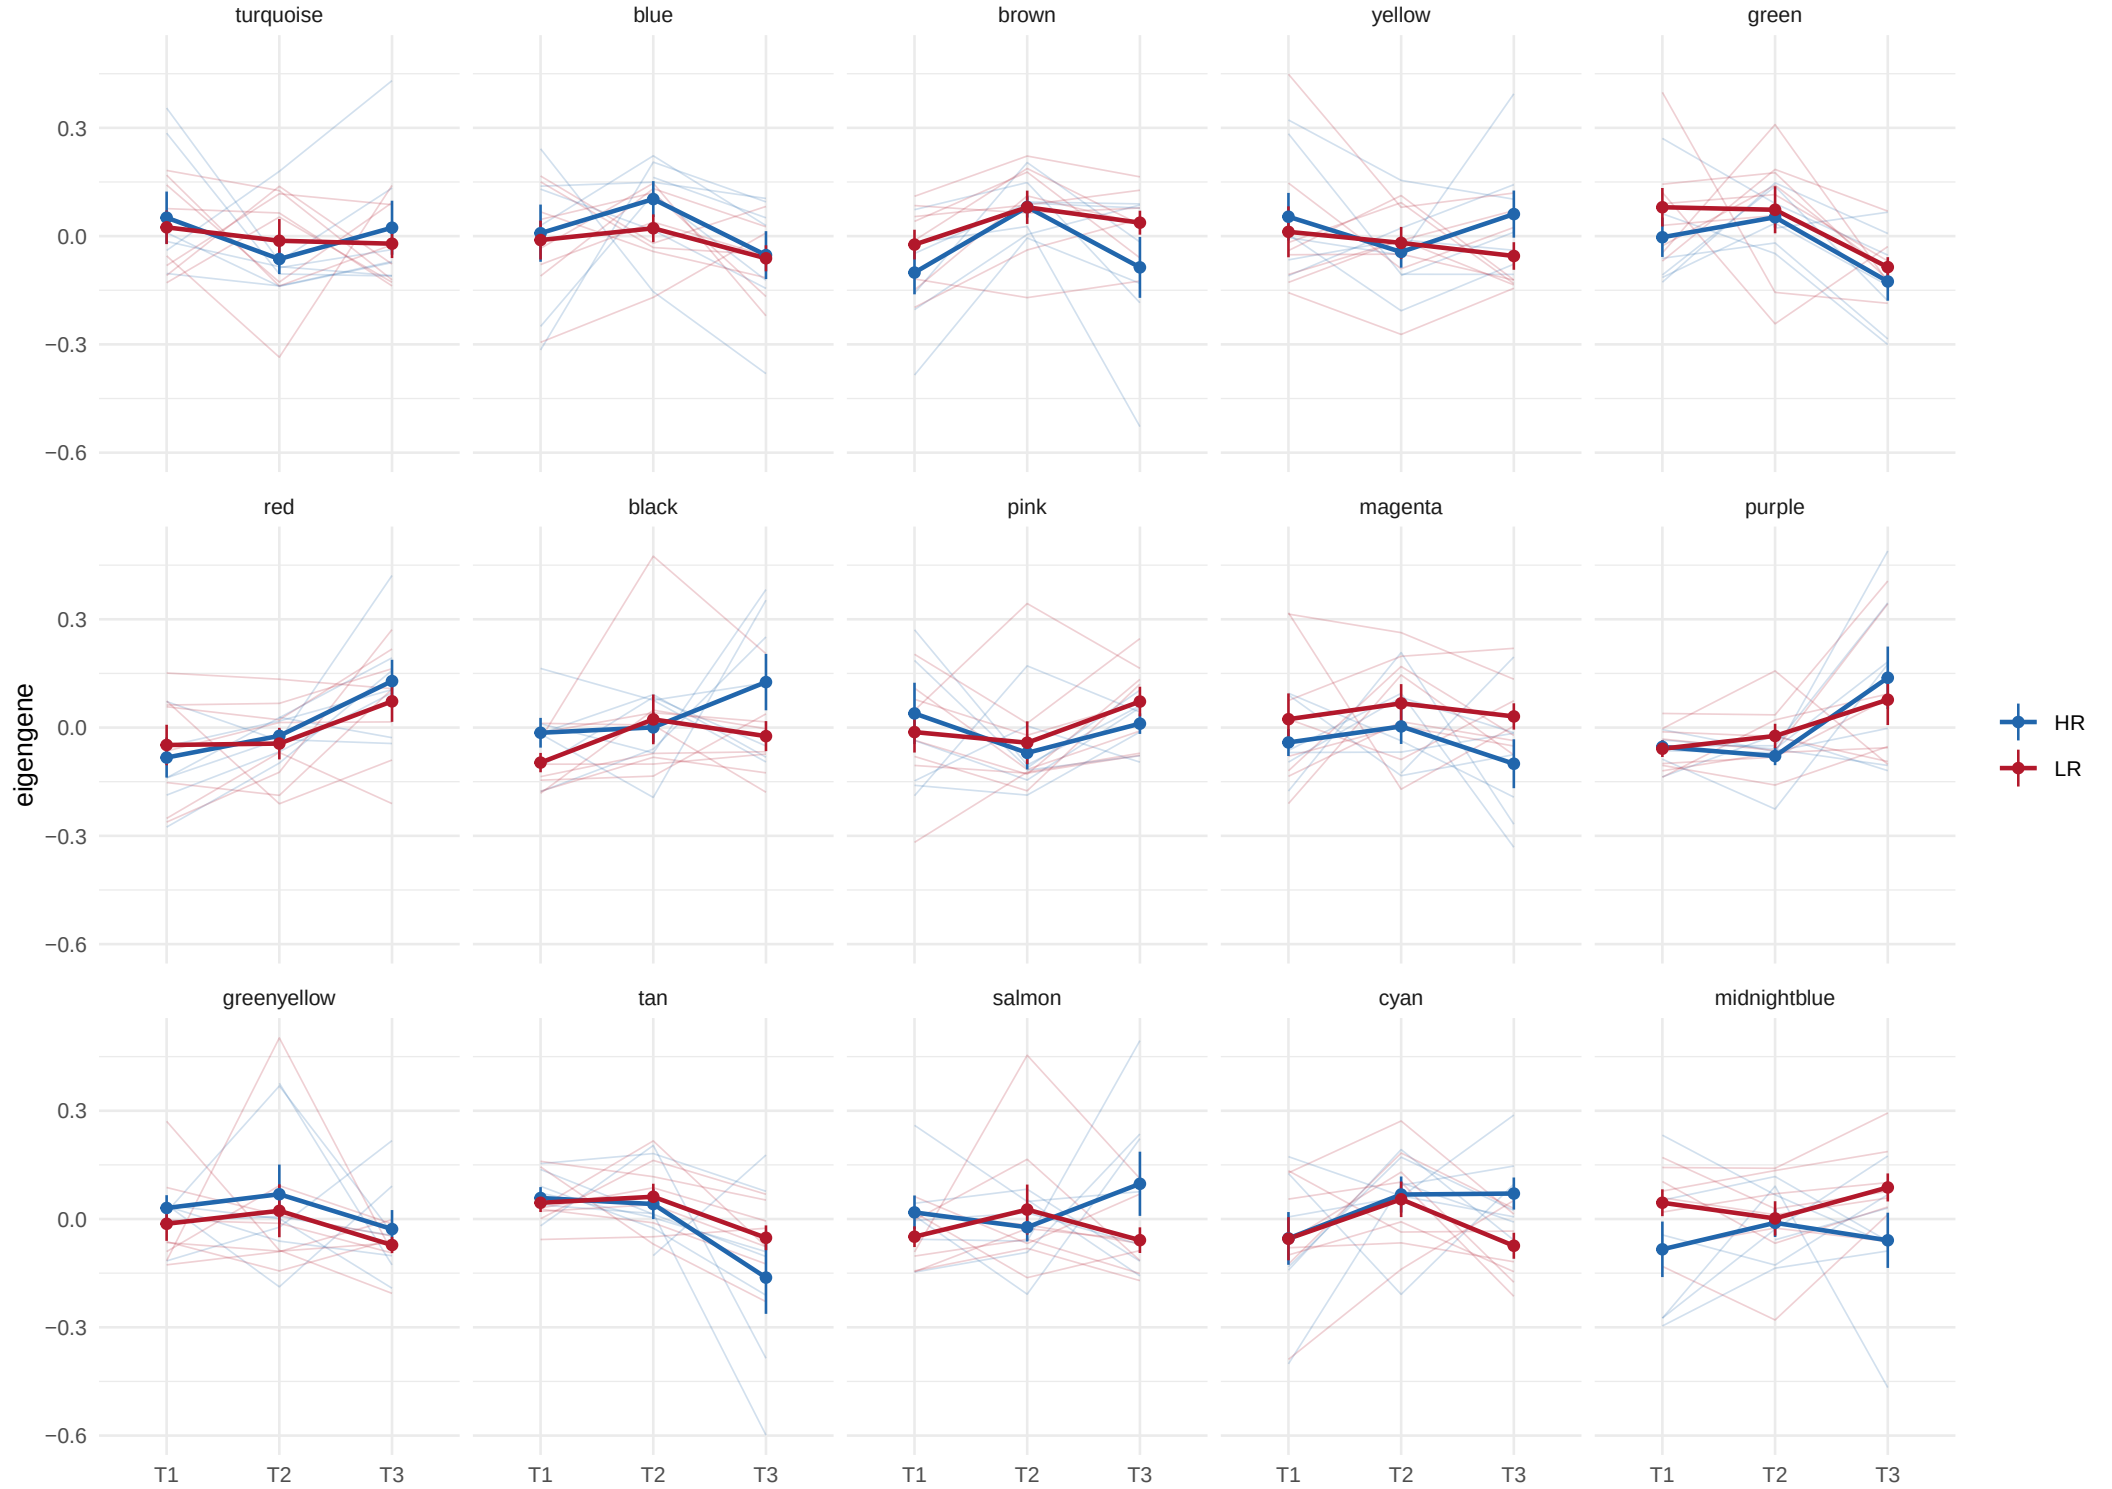
Left: mean connectivity at each power. Right: signed scale−free fit; the dashed line is the 0.85 criterion and the red point the chosen power. Table: c_data/module_building.xlsx, soft_threshold.



Bars: proteins per module. Label: intraclass correlation of the eigengene across a subject's biopsies (lme4, 1 | subject): the share of eigengene variance between subjects. Table: c_data/module_building.xlsx, module_summary.

Eigengene trajectories

module eigengene per biopsy, scored on raw abundance



Thin lines: one subject's biopsies. Thick line and range: arm mean and standard error at each timepoint. Table: c_data/module_building.xlsx, eigengenes.
