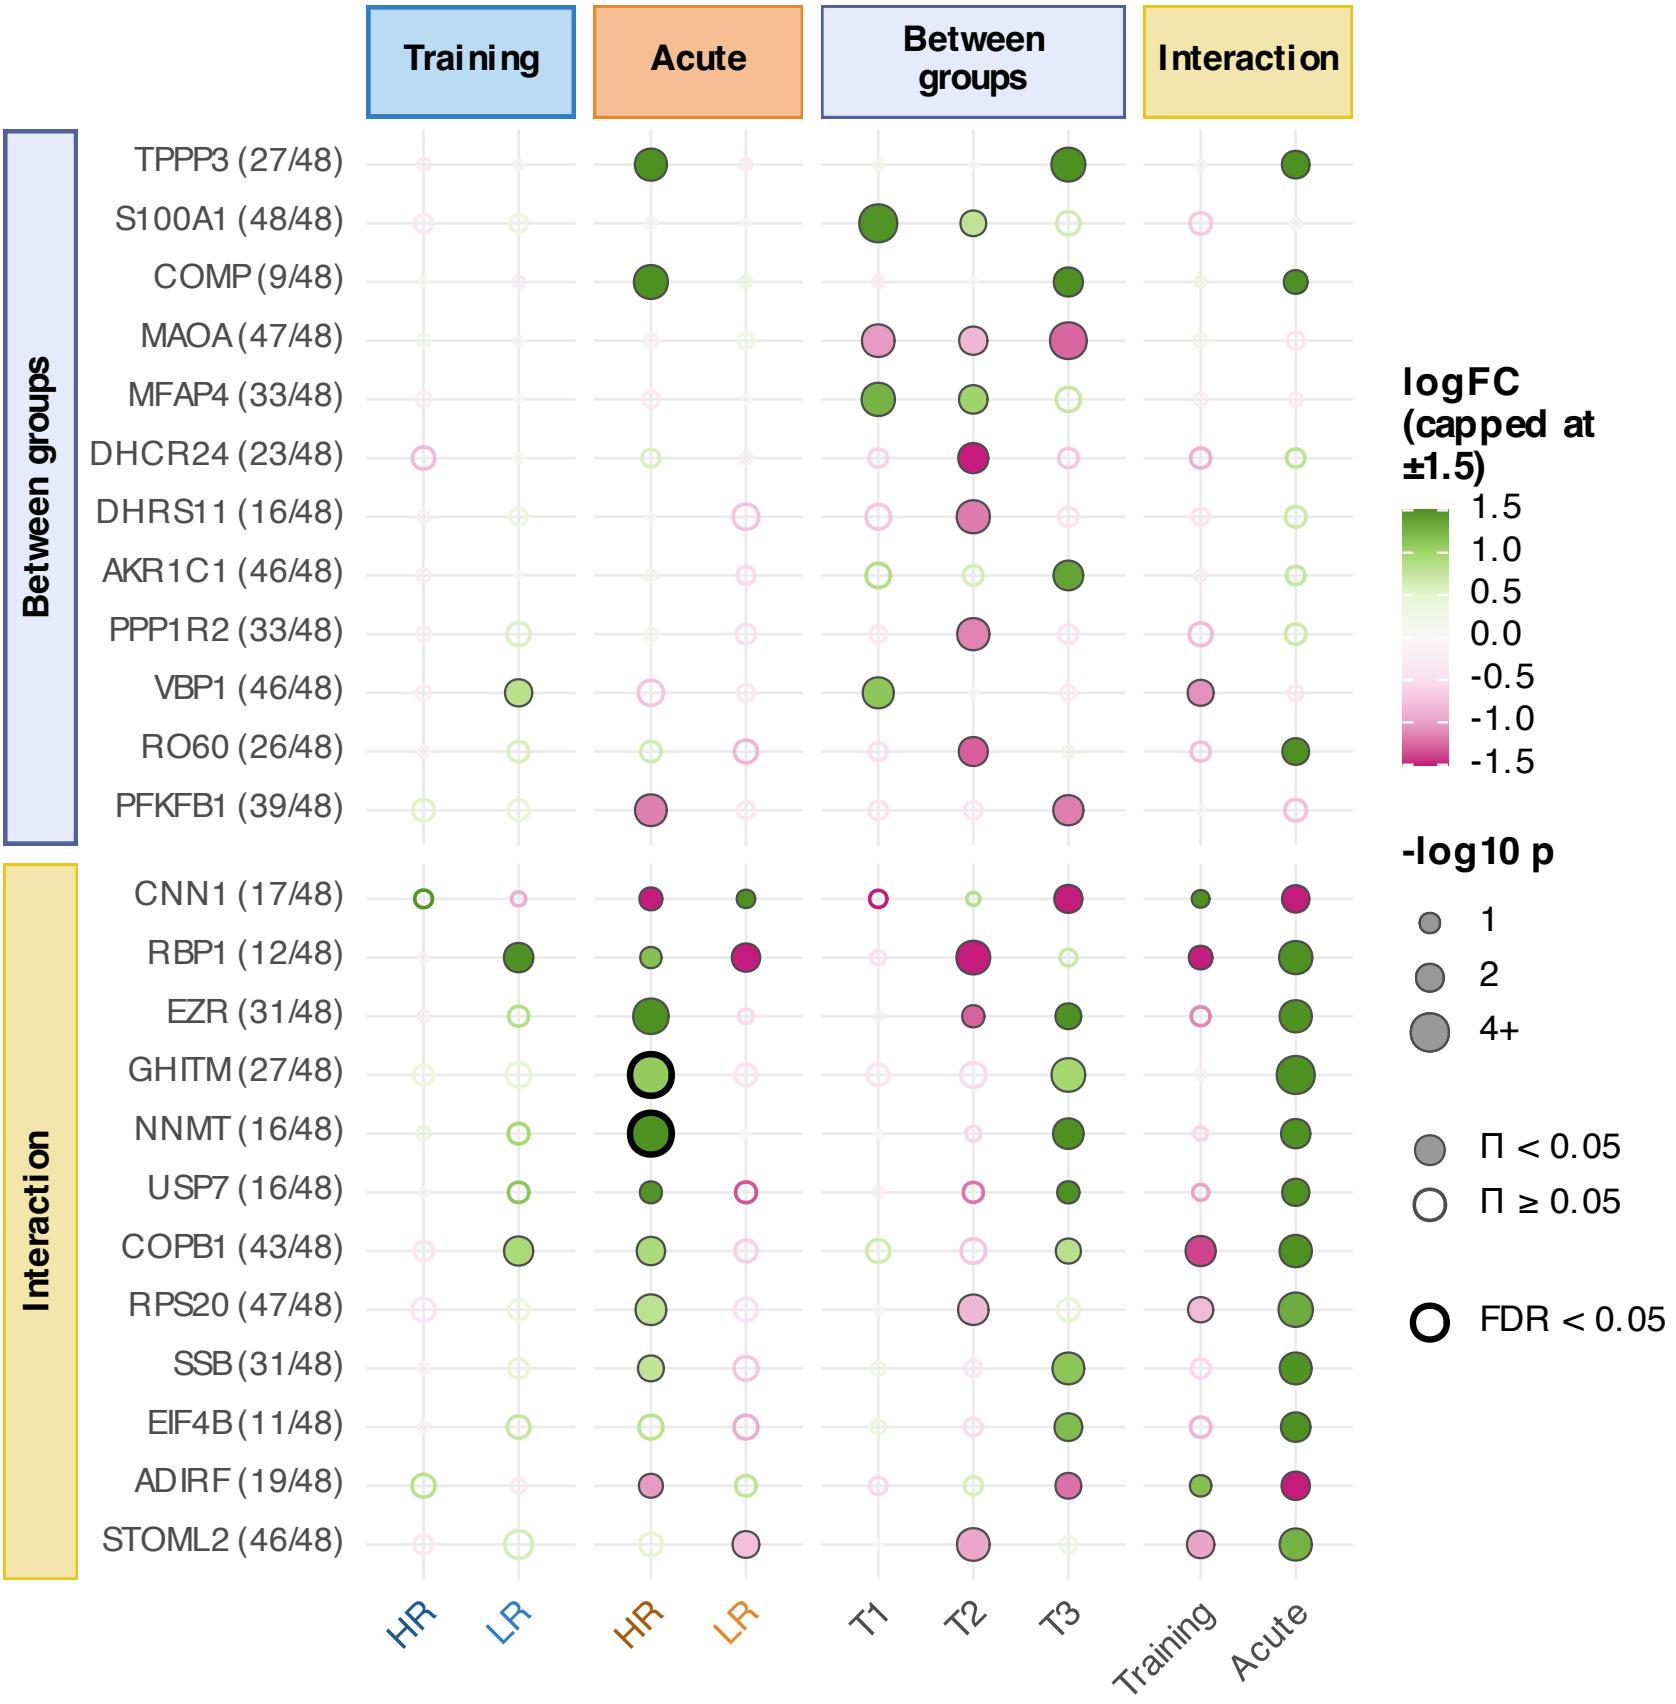
Exploratory HR - LR candidates


Π < 0.05 in an HR - LR or interaction contrast; top 12 per block by Π
p < 0.05: 68 to 141 proteins per contrast, 103 by chance; none at FDR < 0.05
(n/48): biopsies where the protein was observed. Seen in few,
a protein's values are mostly modelled and its logFC can be large
