

turquoise: 2 edges among 25 hubs, 21 without an edge

blue: 67 edges among 25 hubs, 5 without an edge

brown: 8 edges among 25 hubs, 16 without an edge

yellow: 6 edges among 25 hubs, 19 without an edge

## Module hub networks

top 25 members by kME per module, STRING v12 edges at score  $\geq 700$ ; page 2 of 3

**green: 3 edges among 25 hubs, 20 without an edge**

**red: 11 edges among 25 hubs, 13 without an edge**

Nodes: a module's highest-kME members with at least one edge among them, fill = kME, size = degree among the drawn hubs; the title counts those without an edge. Edges: STRING combined score, width = score. Layout is force-directed and seeded; its geometry carries no meaning. Table: c\_data\02\_characterise\_modules.xlsx, hub\_edges.

Module hub networks

top 25 members by kME per module, STRING v12 edges at score >= 700; page 3 of 3

magenta: 68 edges among 25 hubs, 12 without an edge

purple: 167 edges among 25 hubs, 2 without an edge

greenyellow: 209 edges among 25 hubs, 4 without an edge

tan: 202 edges among 25 hubs, 2 without an edge

Nodes: a module's highest-kME members with at least one edge among them, fill = kME, size = degree among the drawn hubs; the title counts those without an edge. Edges: STRING combined score, width = score. Layout is force-directed and seeded; its geometry carries no meaning. Table: c\_data/02\_characterise\_modules.xlsx, hub\_edges.
