

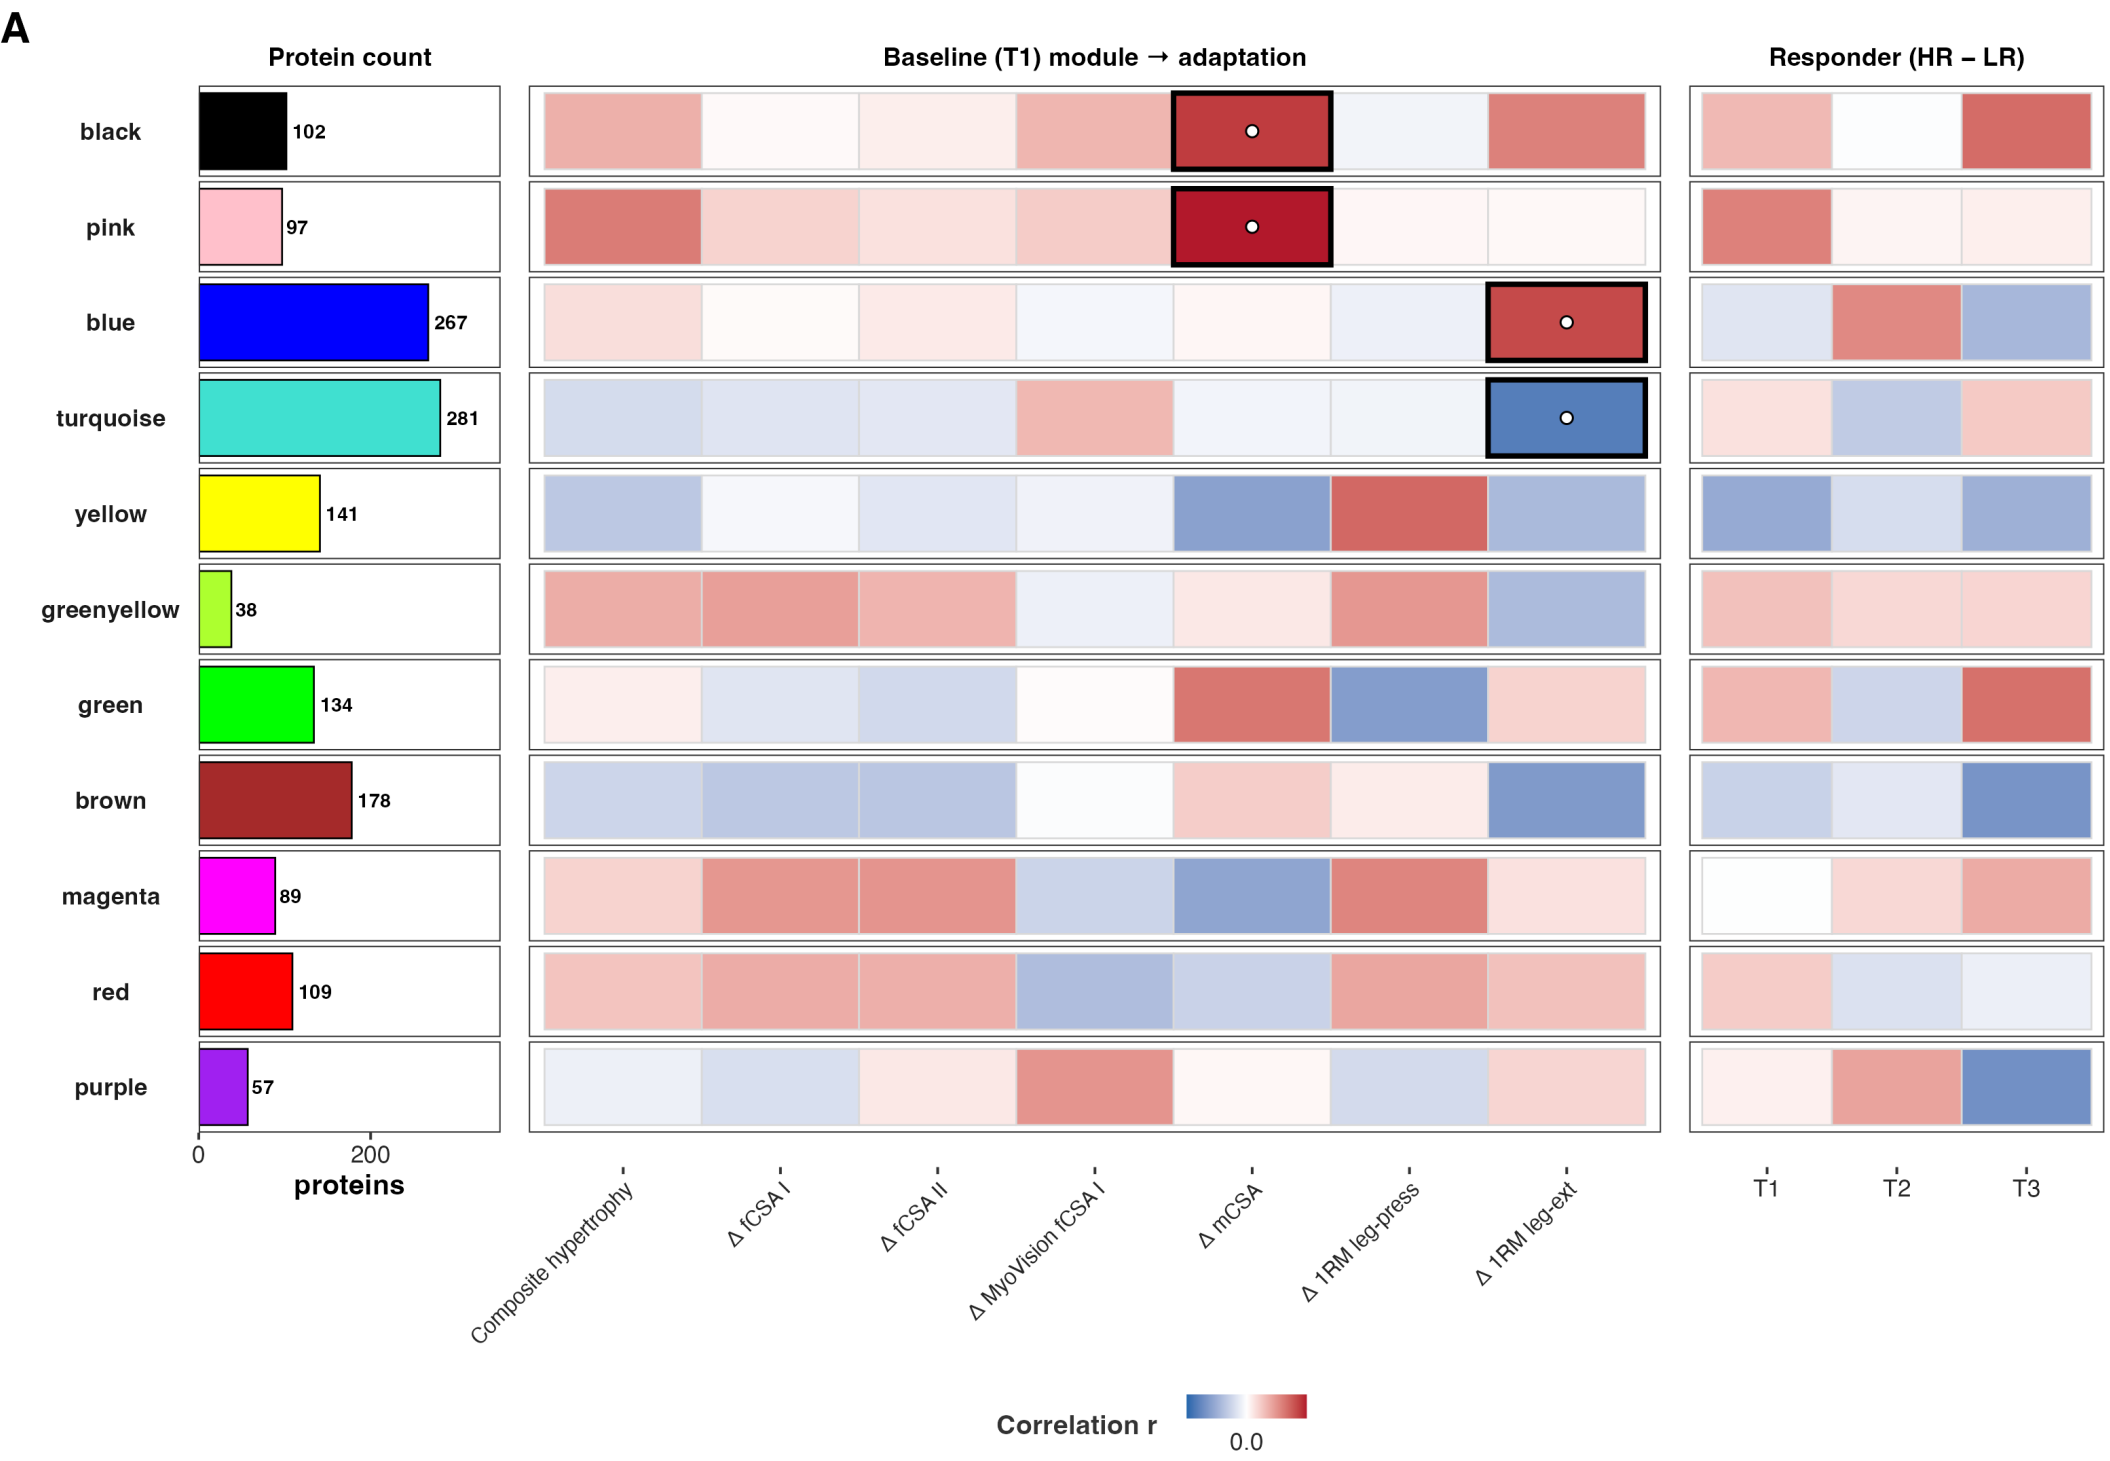

Figure 6. Co-expression module atlas and phenotype links

Unsupervised WGCNA modules, their enriched biology, and how each module's response tracks the phenotype.

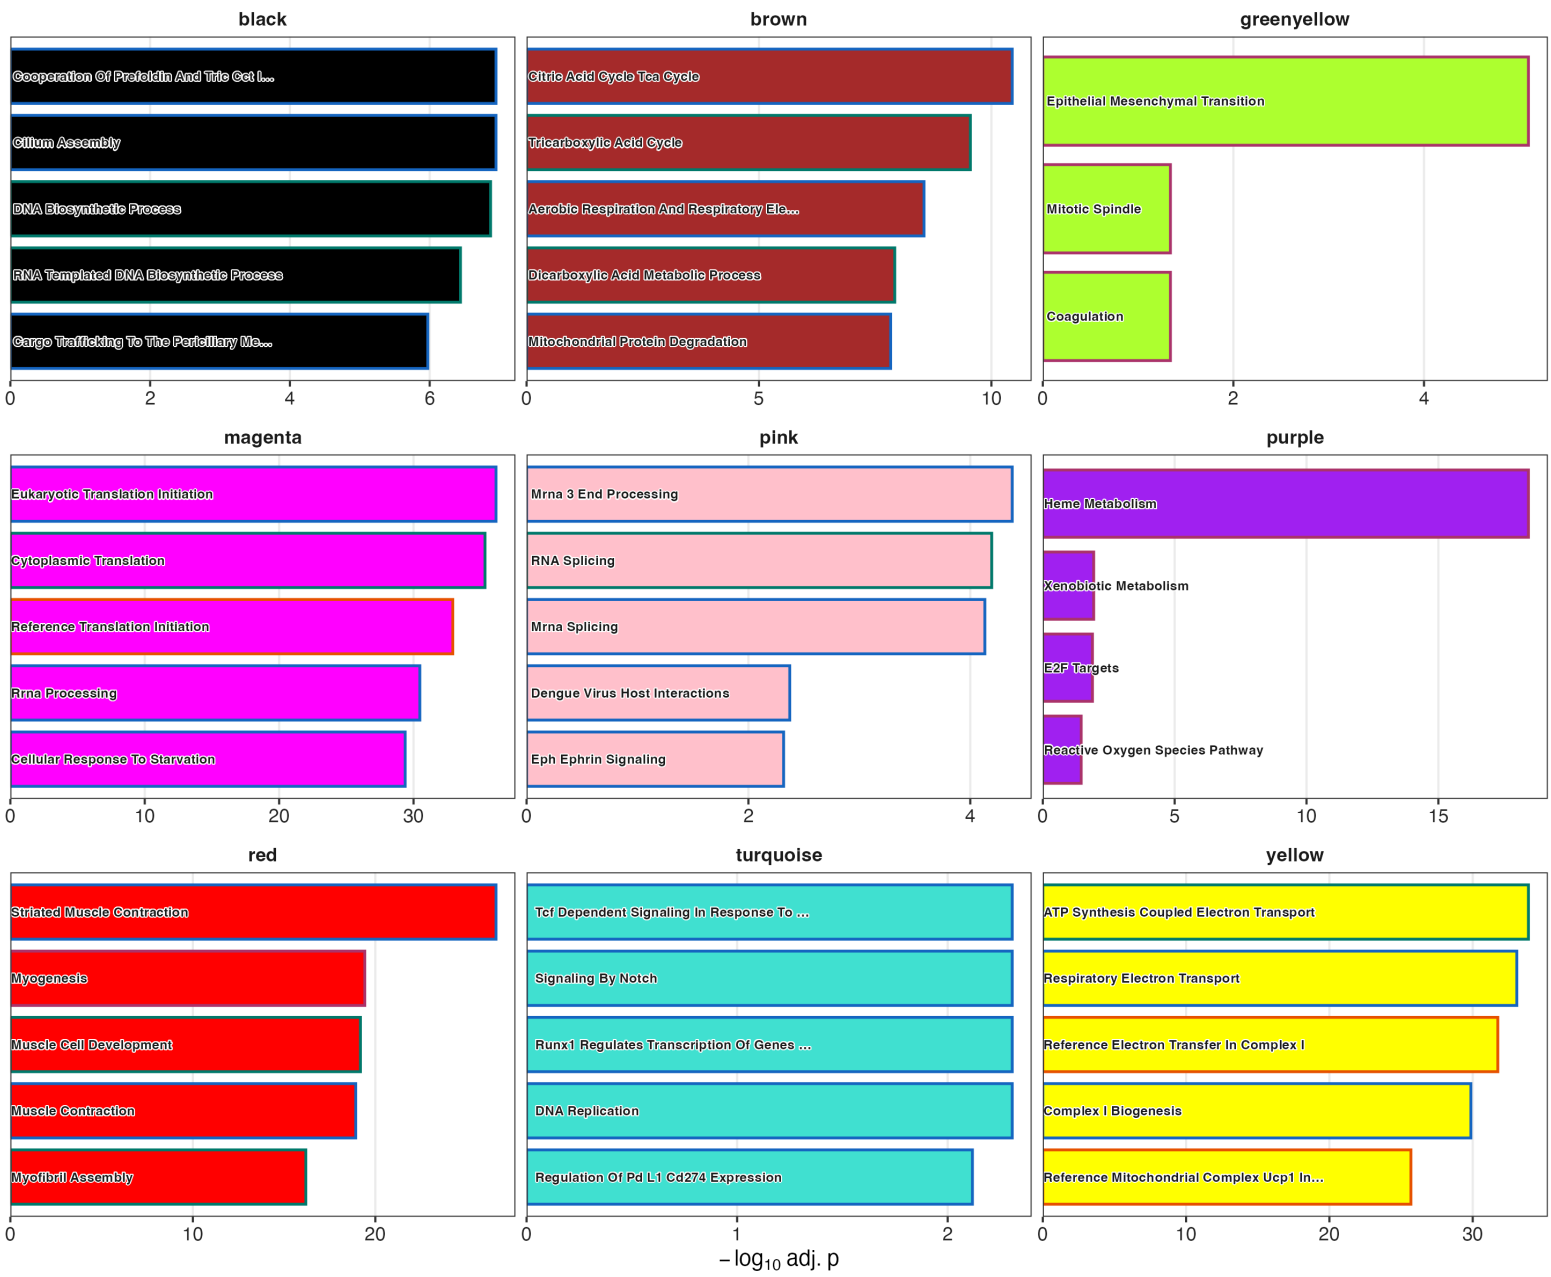

WGCNA module atlas: size, baseline prediction of adaptation, and responder signal

Full-proteome signed network: 1493 proteins in 11 modules (rows ordered by best out-of-sample prediction). Middle: correlation of each module's baseline (T1) eigengene with each training adaptation (Δ T1→T2); v

B Module biology: pathway over-representation by WGCNA module

Hypergeometric ORA with Jaccard de-duplication against the full measured proteome (1896 proteins); top 5 pathways per module, adj. $p < 0.05$. Bar = module colour, outline = source d.

C

Module response vs phenotype

Eigengene change (T1→T3) vs trait; r if $p < 0.05$, * = $FDR < 0.05$
