

Module hub networks

top 25 members by kME per module, STRING v12 edges at score >= 700; page 1 of 3

turquoise: 2 edges among 25 hubs, 21 without an edge

blue: 67 edges among 25 hubs, 5 without an edge

brown: 8 edges among 25 hubs, 16 without an edge

yellow: 6 edges among 25 hubs, 19 without an edge

Nodes: a module's highest-kME members with at least one edge among them, fill = kME, size = degree among the drawn hubs; the title counts those without an edge. Edges: STRING combined score, width = score. Layout is force-directed and seeded; its geometry carries no meaning. Table: c_data/02_characterise_modules.xlsx, hub_edges.
