

Modules as protein sets across the nine contrasts

limma::fry on the imputed matrix, protein design, subject block (correlation 0.176)

Fill: $-\log_{10}$ fry p, positive when the module moved up. fry's FDR runs over the twelve modules within each contrast. Label: nominal p where below 0.05.
Black border: BH < 0.05. Table: c_data/04_test_modules.xlsx.
